Exam : 1Z0-055

Title : Oracle Database 11g: New
Features for 9i OCPs

Version : V1.10

1. Examine the following PL/SQL block:

```
SET SERVEROUTPUT ON  
SET LONG 10000  
DECLARE report clob;  
BEGIN  
report := DBMS_SPM.EVOLVE_SQL_PLAN_BASELINE();  
DBMS_OUTPUT.PUT_LINE(report);  
END;
```

Which statement describes the effect of the execution of the above PL/SQL block?

- A. The plan baselines are verified with the SQL profiles.
- B. All fixed plan baselines are converted into nonfixed plan baselines.
- C. All the nonaccepted SQL profiles are accepted into the plan baseline.
- D. The nonaccepted plans in the SQL Management Base are verified with the existing plan baselines.

Answer: D

2. View the Exhibit to examine the details for an incident.

Which statement is true regarding the status of the incident?

Incident Details: 3937

Page Refreshed August 21, 2007 7:46:17 PM GMT+07:00

- A. The DBA is working on the incident and prefers that the incident be kept in the ADR.
- B. The incident is now in the Done state and the ADR can select the incident to be purged.
- C. The incident has been newly created and is in the process of collecting diagnostic information.
- D. The data collection for the incident is complete and the incident can be packaged and sent to Oracle Support.

Answer: D

3. You want to convert your existing non-ASM files to ASM files for the database PROD. Which method or command would you use to accomplish this task?

- A. Data Pump Export and Import
- B. conventional export and import
- C. the CONVERT command of RMAN
- D. the BACKUP AS COPY.. command of RMAN

Answer: D

4. Which are the prerequisites for performing flashback transactions on your database? (Choose all that apply.)

- A. Supplemental log must be enabled.
- B. Supplemental log must be enabled for the primary key.
- C. Undo retention guarantee for the database must be configured.
- D. Execute permission on the DBMS_FLASHBACK package must be granted to the user.

Answer: ABD

5. Which method would you use to undo the changes made by a particular transaction without affecting the changes made by other transactions?

- A. point-in-time recovery
- B. execute the ROLLBACK command with transaction number
- C. flashback the database to before the transaction was committed
- D. determine all the necessary undo SQL statements from FLASHBACK_TRANSACTION_QUERY and use them for recovery

Answer: D

6. When executing a SQL workload, you choose to generate execution plans only, without collecting execution statistics. Which two statements describe the implications of this? (Choose two.)

- A. It produces less accurate results of the comparison analysis.
- B. It automatically calls the SQL Tuning Advisor for recommendations.
- C. It shortens the time of execution and reduces the impact on system resources.
- D. Only the changes in the execution plan, and not performance regression, are detected.

Answer: AC

7. While deploying a new application module, the software vendor ships the application software along with appropriate SQL plan baselines for the new SQLs being introduced. Which two statements describe the consequences? (Choose two.)

- A. The plan baselines can be evolved over time to produce better performance.
- B. The newly generated plans are directly placed into the SQL plan baseline without being verified.

C. The new SQL statements initially run with the plans that are known to produce good performance under standard test configuration.

D. The optimizer does not generate new plans for the SQL statements for which the SQL plan baseline has been imported.

Answer: AC

8. In your database, the `RESULT_CACHE_MODE` parameter has been set to `MANUAL` in the initialization parameter file.

You issued the following command:

```
SQL>SELECT /*+ RESULT_CACHE */ sale_category, sum(sale_amt)
      FROM sales
      GROUP BY sale_category;
```

Where would the result of this query be stored?

- A. PGA
- B. large pool
- C. shared pool
- D. database buffer cache

Answer: C

9. Identify the activities performed as part of the Automatic SQL Tuning process in the maintenance window? (Choose all that apply.)

- A. generating the SQL profile
- B. testing and accepting the SQL profile
- C. generating a list of candidate SQLs for tuning
- D. adding tuned SQL plans into the SQL plan baseline
- E. tuning each SQL statement in the order of importance
- F. generating baselines that include candidate SQL statement for tuning

Answer: ABCE

10. You performed an incomplete recovery and opened the database with the RESETLOGS option. The LOG_ARCHIVE_FORMAT parameter is set to 'ora_%t_%s_%r.log'. Which statement regarding the archived redo log files, created in an earlier incarnation of the database, is true?

- A. The archived redo log files will be overwritten.
- B. The archived redo log files are deleted automatically.
- C. The archived redo log files should be moved to some other location.
- D. The archived redo log files are still maintained because the file names are unique.

Answer: D

11. View the Exhibit for the object interdependency diagram.

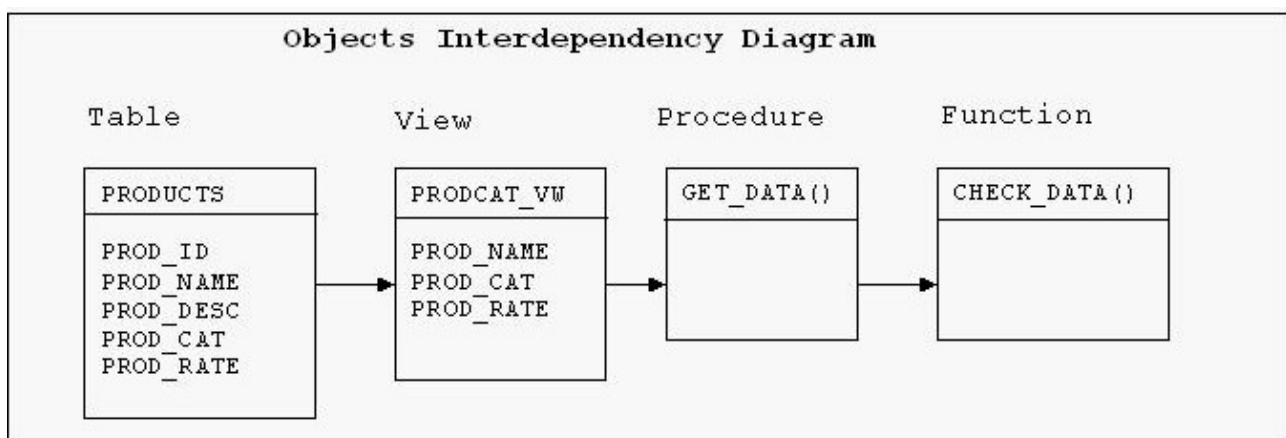

The PRODUCTS table is used to create the PRODCAT_VW view.

PRODCAT_VW is used in the GET_DATA procedure.

GET_DATA is called in the CHECK_DATA function.

A new column PROD_QTY is added to the PRODUCTS table.

How does this impact the status of the dependent objects?

- A. All dependent objects remain valid.
- B. Only the procedure and function become invalid and must be recompiled.

- C. Only the view becomes invalid and gets automatically revalidated the next time it is used.
- D. Only the procedure and function become invalid and get automatically revalidated the next time they are called.

Answer: A

12. Which of the following information will be gathered by the SQL Test Case Builder for the problems pertaining to SQL-related problems? (Choose all that apply.)

- A. ADR diagnostic files
- B. all the optimizer statistics
- C. initialization parameter settings
- D. PL/SQL functions, procedures, and packages
- E. the table and index definitions and actual data

Answer: BCE

13. Your system has been upgraded from Oracle Database 10g to Oracle Database 11g. You imported SQL Tuning Sets (STS) from the previous version. After changing the OPTIMIZER_FEATURE_ENABLE parameter to 10.2.0.4 and running the SQL Performance Analyzer, you observed performance regression for a few SQL statements. What would you do with these SQL statements?

- A. Set OPTIMIZER_USE_PLAN_BASELINES to FALSE to prevent the use of regressed plans.
- B. Capture the plans from the previous version using STS and then load them into the stored outline.
- C. Capture the plans from the previous version using STS and then load them into SQL Management Base (SMB).
- D. Set OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES to FALSE to prevent the plans from being loaded to the SQL plan baseline.

Answer: C

14. Which setting enables the baselines by default in Oracle Database 11g?

- A. setting the STATISTICS_LEVEL parameter to TYPICAL
- B. adding filters to the Automatic Database Diagnostic Monitor (ADDM)
- C. enabling Automated Maintenance Task using Oracle Enterprise Manager

D. setting the OPTIMIZER_USE_PENDING_STATISTICS parameter to TRUE

Answer: A

15. An online tablespace, TEST_TBS, is full and you realize that no server-managed tablespace threshold alerts were generated for the TEST_TBS tablespace. What could be the reason, if the TEST_TBS tablespace does not include autoextensible data files?

- A. TEST_TBS is a small file tablespace.
- B. TEST_TBS is a bigfile tablespace (BFT).
- C. TEST_TBS is the default temporary tablespace.
- D. TEST_TBS is a dictionary-managed tablespace.

Answer: D

16. While performing the backup of the flash recovery area, you notice that one of the archived redo log files is missing. You have multiple destinations for archived redo log files. What implications does it have on the backup of the flash recovery area?

- A. The backup succeeds but it would be without the missing archived log.
- B. The backup fails because one of the archived redo log files is missing.
- C. The backup succeeds because it fails over to one of the alternative archived redo log destinations.
- D. During backup, you are prompted for the alternative destination for the missing archived redo log file.

Answer: C

17. Which two statements are true with respect to the maintenance window? (Choose two.)

- A. A DBA can enable or disable an individual task in all maintenance windows.
- B. A DBA cannot change the duration of the maintenance window after it is created.
- C. In case of a long maintenance window, all Automated Maintenance Tasks are restarted every four hours.
- D. A DBA can control the percentage of the resource allocated to the Automated Maintenance Tasks in each window.

Answer: AD

18. View the Exhibit exhibit1.

In the CUSTOMERS_OBE table, when the value of CUST_STATE_PROVINCE is "CA", the value of COUNTRY_ID is "US"

View the Exhibit exhibit2 to examine the commands and query plans.

The optimizer can sense 8 rows instead of 29 rows, which is the actual number of rows in the table. What can you do to make the optimizer detect the actual selectivity?

```
SQL> DESCRIBE CUSTOMERS_OBE
```

Name	Null?	Type
CUST_ID		NUMBER
CUST_FIRST_NAME	NOT NULL	VARCHAR2 (20)
CUST_LAST_NAME	NOT NULL	VARCHAR2 (40)
CUST_GENDER		CHAR(1)
CUST_YEAR_OF_BIRTH		NUMBER(4)
CUST_MARITAL_STATUS		VARCHAR2 (20)
CUST_STREET_ADDRESS	NOT NULL	VARCHAR2 (40)
CUST_POSTAL_CODE	NOT NULL	VARCHAR2 (10)
CUST_CITY	NOT NULL	VARCHAR2 (30)
CUST_STATE_PROVINCE		VARCHAR2 (40)
COUNTRY_ID	NOT NULL	CHAR(2)
CUST_MAIN_PHONE_NUMBER		VARCHAR2 (25)
CUST_INCOME_LEVEL		VARCHAR2 (30)
CUST_CREDIT_LIMIT		NUMBER
CUST_EMAIL		VARCHAR2 (30)

```
SQL> SELECT COUNT(*) FROM customers_obe WHERE country_id = 'US' AND cust_state_province = 'CA';
```

COUNT(*)
29

```
SQL> EXECUTE dbms_stats.gather_table_stats(null,'customers_obe', method_opt => 'for all columns size 1');
SQL> EXPLAIN PLAN FOR SELECT * FROM customers_obe where country_id = 'US' AND cust_state_province = 'CA';
Explained.
SQL> SELECT plan_table_output FROM TABLE(dbms_xplan.display('plan_table',null,'BASIC ROWS'));
PLAN_TABLE_OUTPUT
-----
Plan hash value: 520139036

-----
| Id | Operation          | Name                | Rows |
-----
|  0 | SELECT STATEMENT    |                     |     8 |
|  1 |  TABLE ACCESS FULL| CUSTOMERS_OBE       |     8 |
-----

8 rows selected.
```

A. Set the STATISTICS_LEVEL parameter to TYPICAL.

B. Change the STALE_PERCENT value for the CUSTOMERS_OBE table.

- C. Set the OPTIMIZER_USE_PENDING_STATISTICS parameter to FALSE.
- D. Create extended statistics for the CUST_STATE_PROVINCE and COUNTRY_ID columns.

Answer: D

19. You issued the following command:

```
CREATE GLOBAL TEMPORARY TABLE admin_work_area
(startdate DATE,
enddate DATE,
class CHAR(20))
ON COMMIT DELETE ROWS
TABLESPACE tbs_t1;
```

An index is then created on the ADMIN_WORK_AREA temporary table.

Which two statements are true regarding the TBS_T1 tablespace in the above command? (Choose two.)

- A. It stores only the temporary table but not its indexes.
- B. It stores both the temporary table as well as its indexes.
- C. It must be a nondefault temporary tablespace for the database.
- D. It can be a default or nondefault temporary tablespace for the database.
- E. It must be the default temporary tablespace of the user who issues the command.

Answer: BD

20. View the Exhibit to examine the error during the database startup.

You open an RMAN session for the database instance. To repair the failure, you executed the following as the first command in the RMAN session:

```
RMAN> REPAIR FAILURE;
```

Which statement describes the consequence of the command?

```
SQL> STARTUP
Total System Global Area  426864640 bytes
Fixed Size                 1300352 bytes
Variable Size             180357248 bytes
Database Buffers          239075328 bytes
Redo Buffers               6131712 bytes
Database mounted.
ORA-01157: cannot identify/lock data file 4 - see DBWR trace file
ORA-01110: data file 4: '/u01/app/oracle/oradata/orcl/users01.dbf'
```

- A. The command performs the recovery and closes the failures.
- B. The command only displays the advice and the RMAN script required for repair.
- C. The command produces an error because the ADVISE FAILURE command has not been executed before the REPAIR FAILURE command.
- D. The command executes the RMAN script to repair the failure and removes the entry from the Automatic Diagnostic Repository (ADR).

Answer: C

21. You are managing an Oracle Database 11g ASM instance with a disk group dg01 having three disks. One of the disks in the disk group becomes unavailable because of power failure. You issued the following command to change the DISK_REPAIR_TIME attribute from 3.6 hours to 5 hours:

```
ALTER DISKGROUP dg01 SET ATTRIBUTE 'disk_repair_time' = '5h';
```

To which disks in the disk group will the new value be applicable?

- A. all disks in the disk group
- B. all disks that are currently in OFFLINE mode
- C. all disks that are not currently in OFFLINE mode
- D. all disks in the disk group only if all of them are ONLINE

Answer: C

22. Which statements are true regarding the Query Result Cache? (Choose all that apply.)

- A. It can be set at the system, session, or table level.

- B. It is used only across statements in the same session.
- C. It can store the results from normal as well as flashback queries.
- D. It can store the results of queries based on normal, temporary, and dictionary tables.

Answer: AC

23. The Database Resource Manager is automatically enabled in the maintenance window that runs the Automated Maintenance Task. What is the reason for this?

- A. to prevent the creation of an excessive number of scheduler job classes
- B. to allow the Automated Maintenance Tasks to use system resources without any restriction
- C. to allow resource sharing only among the Automated Maintenance Tasks in the maintenance window
- D. to prevent the Automated Maintenance Tasks from consuming excessive amounts of system resources

Answer: D

24. Examine the following PL/SQL block:

```
DECLARE
```

```
    my_plans pls_integer;
```

```
BEGIN
```

```
my_plans := DBMS_SPM.LOAD_PLANS_FROM_CURSOR_CACHE (sql_id => ?9twu5t2dn5xd?;
```

```
END;
```

Which statement is true about the plan being loaded into the SQL plan baseline by the above command?

- A. It is loaded with the FIXED status.
- B. It is loaded with the ACCEPTED status.
- C. It is not loaded with the ENABLED status.
- D. It is not loaded with the ACCEPTED status.

Answer: B

25. Which statements describe the capabilities of the DBMS_NETWORK_ACL_ADMIN package?
(Choose all that apply.)

- A. It can be used to allow the access privilege settings for users but not roles.
- B. It can be used to allow the access privilege settings for users as well as roles.
- C. It can be used to control the time interval for which the access privilege is available to a user.
- D. It can be used to selectively restrict the access for each user in a database to different host computers.
- E. It can be used to selectively restrict a user's access to different applications in a specific host computer.

Answer: BCD

26. View the Exhibit to examine the replay settings for replay parameters.

What is the implication for setting the values for replay parameters? (Choose all that apply.)

ORACLE Enterprise Manager 11g Database Control

Setup Preferences Help Logout

Database

Choose Initial Options Customize Options Prepare Replay Clients Wait for Client Connections Review

Set Up Workload Replay: Customize Options

Database orcl

Capture Name

Cancel Back Step 2 of 5 Next

Connections Replay Parameters

Some replay parameters can be modified to change the behavior of the replay.

Name	Value
synchronization	TRUE
connect_time_scale	100
think_time_scale	100
think_time_auto_correct	TRUE

- A. The COMMIT order in the captured workload is preserved during replay.
- B. The value 100 in the THINK_TIME_SCALE parameter attempts to make the replay client shorten the think time between calls.
- C. The value 100 in the CONNECT_TIME_SCALE parameter attempts to connect all sessions as captured.
- D. The value 100 in the THINK_TIME_SCALE parameter attempts to match the captured user think time while replaying.
- E. The value 100 in the CONNECT_TIME_SCALE parameter attempts to connect all sessions immediately as soon as the replay begins.

Answer: ACD

27. You have three production databases, HRDB, FINDB, and ORGDB, that use the same ASM instance.

At the end of the day, while all three production database instances are running, you execute the following command on the ASM instance :

```
SQL> shutdown immediate;
```

What is the result of executing this command?

- A. The ASM instance is shut down, but the other instances are still running.
- B. It results in an error because other database instances are connected to it.
- C. All the instances, including the ASM instance, are shut down in the IMMEDIATE mode.
- D. HRDB, FINDB, and ORGDB instances are shut down in the ABORT mode and the ASM instance is shut down in the IMMEDIATE mode.

Answer: B

28. The application tables owned by the user TEST in a test database need to be exported to the APPS schema in the production database by using Data Pump. Which option of Data Pump Import would you use to accomplish this?

- A. owner
- B. touser
- C. attach
- D. remap_schema

Answer: D

29. View the Exhibit to examine the parameters set for your database instance.

You execute the following command to perform I/O calibration after the declaration of bind variables in the session that are used in the command:

```
SQL> EXECUTE dbms_resource_manager.calibrate_io( num_physical_disks=>1, -  
max_latency=>50, -  
max_iops=>:max_iops, -
```

max_mbps=>:

max_mbps, - actual_latency=>:actual_latency);

Which statement describes the consequence?

NAME	TYPE	VALUE
filesystemio_options	string	ASYNCH
backup_tape_io_slaves	boolean	FALSE
dbwr_io_slaves	integer	0
disk_asynch_io	boolean	TRUE
tape_asynch_io	boolean	TRUE
optimizer_use_pending_statistics	boolean	FALSE
statistics_level	string	TYPICAL
timed_os_statistics	integer	0
timed_statistics	boolean	FALSE
aq_tm_processes	integer	0
db_writer_processes	integer	1
gcs_server_processes	integer	0
global_txn_processes	integer	1
job_queue_processes	integer	1000
log_archive_max_processes	integer	4
processes	integer	150

- A. The command produces an error.
- B. The calibration process runs successfully and populates all the bind variables.
- C. The calibration process runs successfully but the latency time is not computed.
- D. The calibration process runs successfully but only the latency time is computed.

Answer: A

30. What are the advantages of variable extent size support for large ASM files? (Choose two.)

- A. It improves performance in the extended cluster configuration by reading from a local copy of an extent.
- B. It improves resync operations when the disk comes online after being taken offline for maintenance purposes.
- C. This feature enables faster file opens because of the reduction in the amount of memory that is required to store file extents.
- D. Fewer extent pointers are needed to describe the file and less memory is required to manage the extent maps in the shared pool.

Answer: CD

31. Which two initialization parameters would you set to enable Automatic Shared Memory Management?

(Choose two.)

- A. set SHARED_POOL_SIZE to zero
- B. set STATISTICS_LEVEL to BASIC
- C. set SGA_TARGET to a non-zero value
- D. set DB_CACHE_SIZE to a non-zero value
- E. set STATISTICS_LEVEL to TYPICAL or ALL

Answer: CE

32. View the Exhibit to examine the error obtained during the I/O calibration process.

There are no data files on raw devices. What is the reason for this error?

```
SQL> EXECUTE dbms_resource_manager.calibrate_io( -
num_physical_disks=>1, -
max_latency=>50, -
max_iops=>:max_iops, -
max_mbps=>:max_mbps, -
actual_latency=>:actual_latency);
BEGIN dbms_resource_manager.calibrate_io( num_physical_disks=>1, max_latency=>50, max_iops=>:max_iops,
max_mbps=>:max_mbps, actual_latency=>:actual_latency); END;

*
ERROR at line 1:
ORA-56708: Could not find any datafiles with asynchronous i/o capability
ORA-06512: at "SYS.DBMS_RMIN", line 453
ORA-06512: at "SYS.DBMS_RESOURCE_MANAGER", line 1153
ORA-06512: at line 1
```

- A. The DISK_ASYNCH_IO parameter is set to TRUE.
- B. The FILESYSTEMIO_OPTIONS parameter is set to NONE.
- C. Another session runs the I/O calibration process concurrently.
- D. The pending area has not been created before running the I/O calibration process.

Answer: B

33. What are the recommendations for Oracle Database 11g installation to make it Optimal Flexible Architecture (OFA)-compliant? (Choose all that apply.)

- A. ORACLE_BASE should be set explicitly.
- B. An Oracle base should have only one Oracle home created in it.

- C. Flash recovery area and data file location should be on separate disks.
- D. Flash recovery area and data file location should be created under Oracle base in a non-Automatic Storage Management (ASM) setup.

Answer: ACD

34. USER_DATA is a nonencrypted tablespace that contains a set of tables with data. You want to convert all existing data in the USER_DATA tablespace and the new data into the encrypted format. Which methods would you use to achieve this? (Choose all that apply.)

- A. Use Data Pump to transfer the existing data to a new encrypted tablespace.
- B. Use ALTER TABLE..MOVE to transfer the existing data to a new encrypted tablespace.
- C. Use CREATE TABLE AS SELECT to transfer the existing data to a new encrypted tablespace.
- D. Enable row movement for each table to be encrypted and then use ALTER TABLESPACE to encrypt the tablespace.
- E. Encrypt the USER_DATA tablespace using the ALTER TABLESPACE statement so that all the data in the tablespace is automatically encrypted.

Answer: ABC

35. You are working as a DBA on the decision support system. There is a business requirement to track and store all transactions for at least three years for a few tables in the database. Automatic undo management is enabled in the database. Which configuration should you use to accomplish this task?

- A. Enable Flashback Data Archive for the tables.
- B. Enable supplemental logging for the database.
- C. Specify undo retention guarantee for the database.
- D. Create Flashback Data Archive on the tablespace on which the tables are stored.
- E. Query V\$UNDOSTAT to determine the amount of undo that will be generated and create an undo tablespace for that size.

Answer: A

36. You are managing an Oracle Database 11g instance with ASM storage. The ASM instance is down. To know the details of the disks in the DATA disk group, you issued the following ASMCMD command:

ASMCMD> lsdisk -l -d DATA

Which statement is true regarding the outcome of this command?

- A. The command succeeds but it retrieves only the disk names.
- B. The command produces an error because the ASM instance is down.
- C. The command succeeds but it shows only the status of the ASM instance.
- D. The command succeeds and retrieves information by scanning the disk headers based on an ASM_DISKSTRING value.

Answer: D

37. You are managing an Oracle 11g database with ASM storage, for which the COMPATIBLE initialization parameter is set to 11.1.0. In the ASM instance, the COMPATIBLE.RDBMS attribute for the disk group is set to 10.2 and the COMPATIBLE.ASM attribute is set to 11.1. Which two statements are true in this scenario for the features enabled for ASM? (Choose two.)

- A. The ASM-preferred mirror read feature is enabled.
- B. The ASM supports variable sizes for extents of 1, 8, and 64 allocation units.
- C. The ASM disk is dropped immediately from a disk group when it becomes unavailable.
- D. The RDBMS always reads the primary copy of a mirrored extent of the ASM disk group.

Answer: AB

38. View the Exhibit to examine the parameter values.

You are planning to set the value for the MEMORY_TARGET parameter of your database instance. What value would you assign?

```
SQL> SHOW PARAMETER TARGET
```

NAME	TYPE	VALUE
archive_lag_target	integer	0
db_flashback_retention_target	integer	1440
fast_start_io_target	integer	0
fast_start_mttr_target	integer	0
memory_max_target	big integer	0
memory_target	big integer	0
pga_aggregate_target	big integer	90M
sga_target	big integer	272M

A. 90 MB

B. 272 MB

C. 362 MB

D. 1440 MB

Answer: C

39. On which two database objects can the VERSIONS clause of the Flashback Versions Query be used?

(Choose two.)

A. fixed tables

B. heap tables

C. external tables

D. temporary tables

E. Index-Organized Tables (IOTs)

Answer: BE

40. You decided to use Direct NFS configuration in a non-RAC Oracle installation and created the oranfstab file in /etc. Which two statements are true regarding this oranfstab file? (Choose two.)

A. Its entries are specific to a single database.

B. It contains file systems that have been mounted by Direct NFS.

C. It is globally available to all Oracle 11g databases on the machine.

D. It contains file systems that have been mounted by the kernel NFS system.

Answer: CD

41. You want to track and store all transactional changes to a table over its lifetime. To accomplish this task, you enabled Flashback Data Archive with the retention of 5 years. After some time, the business requirement changed and you were asked to change the retention from 5 years to 3 years. To accomplish this, you issued the following command:

```
ALTER FLASHBACK ARCHIVE fla1 MODIFY RETENTION 3 YEAR;
```

What is the implication of this command?

- A. The command produces an error because the retention time cannot be reduced.
- B. All historical data older than three years is purged from the flashback archive FLA1.
- C. All historical data is purged and the new flashback data archives are maintained for three years.
- D. All historical data is retained but the subsequent flashback data archives are maintained for only three years.

Answer: B

42. View the Exhibit to examine the Automatic Database Diagnostic Monitor (ADDM) tasks.

You executed the following commands:

```
SQL> VAR tname VARCHAR2(60);
```

```
SQL> BEGIN
```

```
    :tname := 'my_instance_analysis_mode_task';
```

```
    DBMS_ADDM.INSERT_SEGMENT_DIRECTIVE(:tname,'Sg_directive','SCOTT');
```

```
END;
```

Which statement describes the consequence?

Advisor Tasks Change Default Parameters

Search

Select an advisory type and optionally enter a task name to filter the data that is displayed in your results set.

Advisory Type: Task Name: Advisor Runs: Status:

By default, the search returns all uppercase matches beginning with the string you entered. To run an exact or case-sensitive match, double quote the search string. You can use the wildcard symbol (%) in a double quoted string.

Results

Select	Advisory Type	Name	Description	User	Status	Start Time ▾	Duration (seconds)	Expires In (days)
<input type="radio"/>	ADDM	ADDM:1158544296_1_50	ADDM auto run: snapshots [49, 50], instance 1, database id 1158544296	SYS	COMPLETED	Aug 19, 2007 11:00:22 AM	1	30
<input checked="" type="radio"/>	ADDM	my_instance_analysis_mode_task		SYS	COMPLETED	Aug 19, 2007 10:01:23 AM	4	30
<input type="radio"/>	ADDM	ADDM:1158544296_1_47	ADDM auto run: snapshots [46, 47], instance 1, database id 1158544296	SYS	COMPLETED	Aug 19, 2007 6:01:06 AM	7	30
<input type="radio"/>	ADDM	ADDM:1158544296_1_46	ADDM auto run: snapshots [45, 46], instance 1	SYS	COMPLETED	Aug 19, 2007 5:00:56 AM	0	30

- A. The ADDM task is filtered to suppress the Segment Advisor suggestions for the SCOTT schema.
- B. The ADDM task is filtered to produce the Segment Advisor suggestions for the SCOTT schema only.
- C. The PL/SQL block produces an error because the my_instance_analysis_mode_task task has not been reset to its initial state.
- D. All subsequent ADDM tasks including my_instance_analysis_mode_task are filtered to suppress the Segment Advisor suggestions for the SCOTT schema.

Answer: C

43. View the following SQL statements:

Transaction T1

```
INSERT INTO hr.regions VALUES (5,'Pole');
```

COMMIT;

Transaction T2

```
UPDATE hr.regions SET region_name='Poles' WHERE region_id = 5;  
COMMIT;
```

Transaction T3

```
UPDATE hr.regions SET region_name='North and South Poles' WHERE  
region_id = 5;
```

You want to back out transaction T2. Which option would you use?

- A. It is possible, but transaction T3 also backs out.
- B. It is possible with the NOCASCADE_FORCE option.
- C. It is possible with the NONCONFLICT_ONLY option.
- D. It is not possible because it has conflicts with transaction T3.

Answer: B

44. You set the following parameters in the parameter file and restarted the database:

```
MEMORY_MAX_TARGET=0  
MEMORY_TARGET=500M  
PGA_AGGREGATE_TARGET=90M  
SGA_TARGET=270M
```

Which two statements are true regarding these parameters after the database instance is restarted?
(Choose two.)

- A. The MEMORY_MAX_TARGET parameter is automatically set to 500 MB.
- B. The value of the MEMORY_MAX_TARGET parameter remains zero till it is changed manually.

- C. The PGA_AGGREGATE_TARGET and SGA_TARGET parameters are automatically set to zero.
- D. The lower bounds of PGA_AGGREGATE_TARGET and SGA_TARGET parameters are set to 90 MB and 270 MB, respectively.

Answer: AD

45. You are managing an Oracle Database 11g instance. You want to create a duplicate database for testing purpose. What are the prerequisites for performing the active database duplication? (Choose all that apply.)

- A. The source database backup must be copied over the net for test database.
- B. The source database must be run in ARCHIVELOG mode if the database is open.
- C. The source database must be shut down cleanly if the database is in mounted state.
- D. A net service name should be set up and a listener configured with the target as well as the source database.

Answer: BCD

46. Which statements are true regarding the concept of problems and incidents in the fault diagnosability infrastructure for Oracle Database 11g? (Choose all that apply.)

- A. The problem key is the same as the incident number.
- B. Every problem has a problem key, which is a text string that describes the problem.
- C. The database makes an entry into the alert log file when problems and incidents occur.
- D. The database sends an incident alert to the Oracle Enterprise Manager Database Home page.
- E. Only the incident metadata and dumps are stored in the Automatic Diagnostic Repository (ADR).

Answer: BCD

47. The SQL Tuning Advisor has been configured with default configurations in your database instance. Which recommendation is automatically implemented without the DBA's intervention after the SQL Tuning Advisor is run as part of the AUTOTASK framework?

- A. statistics recommendations
- B. SQL profile recommendations
- C. index-related recommendations

D. restructuring of SQL recommendations

Answer: B

48. Immediately after adding a new disk to or removing an existing disk from an ASM instance, you find that the performance of the database goes down initially until the time the addition or removal process is completed, and then gradually becomes normal. Which two activities would you perform to maintain a consistent performance of the database while adding or removing disks? (Choose two.)

- A. Define the POWER option while adding or removing the disks.
- B. Increase the number of ARB processes by setting up a higher value for ASM_POWER_LIMIT.
- C. Increase the number of DBWR processes by setting up a higher value for DB_WRITER_PROCESSES.
- D. Increase the number of slave database writer processes by setting up a higher value for DBWR_IO_SLAVES.

Answer: AB

49. Which two statements regarding a SQL profile are true? (Choose two.)

- A. It is built by Automatic Tuning Optimizer.
- B. It cannot be stored persistently in the data dictionary.
- C. It can be used by the query optimizer automatically.
- D. It can be created manually by using the CREATE PROFILE command.

Answer: AC

50. View the Exhibit to examine the output for the V\$DIAG_INFO view.

Which statements are true regarding the location of diagnostic traces? (Choose all that apply.)

```
SELECT * FROM V$DIAG_INFO;
```

INST_ID	NAME	VALUE
1	Diag Enabled	TRUE
1	ADR Base	/u01/oracle
1	ADR Home	/u01/oracle/diag/rdbms/orclbi/orclbi
1	Diag Trace	/u01/oracle/diag/rdbms/orclbi/orclbi/trace
1	Diag Alert	/u01/oracle/diag/rdbms/orclbi/orclbi/alert
1	Diag Incident	/u01/oracle/diag/rdbms/orclbi/orclbi/incident
1	Diag Cdump	/u01/oracle/diag/rdbms/orclbi/orclbi/cdump
1	Health Monitor	/u01/oracle/diag/rdbms/orclbi/orclbi/hm
1	Default Trace File	/u01/oracle/diag/rdbms/orclbi/orclbi/trace/orcl_ora_22769.trc
1	Active Problem Count	8

- A. The path to the location of the background as well as the foreground process trace files is /u01/oracle/diag/rdbms/orclbi/orclbi/trace.
- B. The location of the text alert log file is /u01/oracle/diag/rdbms/orclbi/orclbi/alert.
- C. The location of the trace file for the current session is /u01/oracle/diag/rdbms/orclbi/orclbi/trace.
- D. The location of the XML-formatted version of the alert log is /u01/oracle/diag/rdbms/orclbi/orclbi/alert.

Answer: ACD

51. Examine the following RMAN command:

```
BACKUP DATABASE
```

```
TAG TESTDB
```

```
KEEP UNTIL 'SYSDATE+1'
```

```
RESTORE POINT TESTDB06;
```

Which two statements are true regarding the backup taken by using the above RMAN command?
(Choose two.)

- A. Only data files and the control file are backed up.
- B. Archived redo logs are backed up only if the database is open during the backup.
- C. The backup is deleted after one day, regardless of the default retention policy settings.
- D. The backup becomes obsolete after one day, regardless of the default retention policy settings.

Answer: BD

52. Which tasks can be accomplished using the Enterprise Manager Support Workbench in Oracle Database 11g? (Choose all that apply.)

- A. Generate reports on data failure such as data file failures.
- B. You can package and upload diagnostic data to Oracle Support.
- C. You can track the Service Request (SR) and implement repairs.
- D. You can manually run health checks to gather diagnostic data for a problem.

Answer: BCD

53. You are working on a CATDB database that contains an Oracle Database version 11.1 catalog schema owned by the user RCO11. The INST1 database contains an Oracle Database version 10.1 catalog schema owned by the user RCAT10.

You want the RMAN to import metadata for database IDs 1423241 and 1423242, registered in RCAT10, into the recovery catalog owned by RCO11. You also want to deregister them from the catalog after import.

You executed the following commands to achieve this:

```
RMAN> CONNECT CATALOG rco11/password@catdb
```

```
RMAN> IMPORT CATALOG rcat10/oracle@inst1 DBID=1423241,1423242;
```

What happens if the RCO11 catalog has scripts with the same name as that of the scripts in RCAT10 catalog?

- A. The scripts in the RCO11 catalog are overwritten.
- B. RMAN renames the local stored scripts in the RCO11 catalog.
- C. The RMAN session in which the command is executed aborts.
- D. RMAN renames the global scripts that are imported from the RCAT10 catalog.

Answer: D

54. You executed the following command to drop a user:

```
DROP USER scott CASCADE;
```

Which two statements regarding the above command are correct? (Choose two.)

- A. All the objects of scott are moved to the Recycle Bin.
- B. Any objects in the Recycle Bin belonging to scott are purged.
- C. All the objects owned by scott are permanently dropped from the database.
- D. All the objects of scott in the Recycle Bin must be purged before executing the DROP command.
- E. Any objects in the Recycle Bin belonging to scott will not be affected by the above DROP command.

Answer: BC

55. You executed the following command:

```
RMAN> RECOVER COPY OF DATAFILE '/u01/app/oracle/oradata/orcl/users01.dbf';
```

Which statement regarding the above command is correct?

- A. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the image copy.
- B. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the last incremental backup.
- C. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are updated with all changes up to incremental backup SCN.
- D. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are recovered using the above command if data file recovery fails.

Answer: C

56. You have 100 segments in the USERS tablespace. You realize that the USERS tablespace is running low on space. You can use Segment Advisor to _____.

- A. identify the segments that you should shrink
- B. modify the storage parameters for the tablespace
- C. automatically shrink the segments with unused space

D. check the alerts generated for the tablespace that is running low on space

Answer: A

57. Which two statements are true regarding table compression? (Choose two.)

- A. It requires uncompress operation during I/O.
- B. It saves disk space and reduces memory usage.
- C. It saves disk space but has no effect on memory usage.
- D. It incurs extra CPU overhead during DML but not direct loading operations.
- E. It incurs extra CPU overhead during DML as well as direct loading operations.

Answer: BE

58. What recommendations does the SQL Access Advisor provide for optimizing SQL queries? (Choose all that apply.)

- A. selection of SQL plan baselines
- B. partitioning of tables and indexes
- C. creation of index-organized tables
- D. creation of bitmap, function-based, and B-tree indexes
- E. optimization of materialized views for maximum query usage and fast refresh

Answer: BDE

59. Your company wants to upgrade the current production database to the RAC environment. To perform testing before migrating to the RAC environment, you performed the workload capture on the production database to record the peak workload. You set up the test RAC database and want to replay the recorded workload on the test machine. Note the following steps that you may require to replay the database workload:

- 1) Preprocess the captured workload.
- 2) Restart the database in RESTRICTED mode.
- 3) Set up the Replay Clients.
- 4) Restore the test database to the point when the capture started.

5) Remap connections.

Arrange the steps required in the correct sequence to accomplish this task on the test machine.

- A. 2, 1, 5, 3, 4
- B. 1, 2, 4, 5, 3
- C. 1, 4, 5, 3 (2 is not required.)
- D. 1, 2, 4, 5 (3 is not required.)
- E. 1, 4, 3, 5 (2 is not required.)

Answer: C

60. Evaluate the following command:

```
SQL>ALTER SYSTEM SET db_securefile = 'IGNORE';
```

What is the impact of this setting on the usage of SecureFiles?

- A. It forces BasicFiles to be created even if the SECUREFILE option is specified to create the LOB.
- B. It forces SecureFiles to be created even if the BASICFILE option is specified to create the LOB.
- C. It does not allow the creation of SecureFiles and generates an error if the SECUREFILE option is specified to create the LOB.
- D. It ignores the SECUREFILE option only if a Manual Segment Space Management tablespace is used and creates a BasicFile.

Answer: A

61. In which situations will the ASM metadata backup help you recover the ASM disk in a disk group?
(Choose all that apply.)

- A. when one or more disks in an ASM disk group are lost
- B. when the data file on an ASM disk group gets corrupted
- C. when one of the disks in a disk group is accidentally unplugged
- D. when one or more file directory paths are accidentally deleted from an ASM disk group

Answer: AD

62. Which three actions are required to configure the Flashback Database? (Choose three.)

- A. set Flash Recovery Area
- B. enable Flashback logging
- C. create FLASHBACK tablespace
- D. start the database in the ARCHIVELOG mode
- E. start the database in the NOARCHIVELOG mode

Answer: ABD

63. You have three temporary tablespace groups named G1, G2, and G3 in your database.

You are creating a new temporary tablespace as follows:

```
CREATE TEMPORARY TABLESPACE TEMP1 TEMPFILE '/u1/data/temp1.dbf' SIZE 10M TABLESPACE  
GROUP ";
```

Which statement regarding the above command is correct?

- A. It will create the tablespace TEMP1 in group G1.
- B. It will create the tablespace TEMP1 in group G3.
- C. It will not add the tablespace TEMP1 to any group.
- D. It will create the tablespace TEMP1 in the default group.

Answer: C

64. ENCRYPT_TS is an encrypted tablespace that contains tables with data.

Which statement is true regarding the effect of queries and data manipulation language (DML) statements on the encrypted data in the tables?

- A. The data is decrypted during SORT and JOIN operations.
- B. The data remains encrypted when it is read into memory.
- C. The data remains encrypted when it is stored in the redo logs.

D. The data remains encrypted in the UNDO tablespace provided that the UNDO tablespace was created with the encryption option enabled.

Answer: C

65. The ADMIN_EMP table has columns EMPNO, ENAME, DEPTNO, and SAL. It has a materialized view EMP_MV with a materialized log and an ENAME_IDX index on the ENAME column.

You need to perform an online table redefinition on the ADMIN_EMP table to move it from the TBS1 tablespace to the TBS2 tablespace in the same schema.

What action is required for the dependent objects when you perform online redefinition on the table?

- A. The materialized view should have a fast refresh performed after the online table redefinition is completed.
- B. The materialized view should have a complete refresh performed after the online table redefinition is completed.
- C. The materialized view, materialized log, and the index should be dropped and re-created after the online table redefinition is complete.
- D. The materialized view and materialized log should be dropped and all constraints disabled and re-created after the online table redefinition is complete.

Answer: B

66. In which two aspects does hot patching differ from conventional patching? (Choose two.)

- A. It consumes more memory compared with conventional patching.
- B. It can be installed and uninstalled via OPatch unlike conventional patching.
- C. It takes more time to install or uninstall compared with conventional patching.
- D. It does not require down time to apply or remove unlike conventional patching.
- E. It is not persistent across instance startup and shutdown unlike conventional patching.

Answer: AD

67. Identify the two direct sources from where SQL plans can be loaded into the SQL plan baselines.

(Choose two.)

- A. Cursor cache
- B. Stored outline
- C. SQL Tuning Set
- D. Automatic Workload Repository (AWR) snapshots

Answer: AC

68. Which two prerequisites are needed for performing workload capture and replay? (Choose two.)

- A. setting up the directory to capture the workload
- B. running the database in shared server mode
- C. Close all sessions performing queries using database links.
- D. The database on which the workload is replayed has to be a restore of the original database to a specific SCN.

Answer: AD

69. Which statement is true regarding the VALIDATE DATABASE command executed in RMAN session?

- A. It checks the database for intrablock corruptions only.
- B. It checks for block corruption in the valid backups of the database.
- C. It checks the database for both intrablock and interblock corruptions.
- D. It checks for only those corrupted blocks that are associated with data files.

Answer: A

70. You are managing an Oracle Database 11g database. You want to take a backup on tape drives of the USERS tablespace that has a single data file of 900 MB. You have tape drives of 300 MB each. To accomplish the backup, you issued the following RMAN command:

```
RMAN>BACKUP
```

```
SECTION SIZE 300M
```

```
TABLESPACE users;
```

What configuration should be effected to accomplish faster and optimized backups by using the above command?

- A. The SBT channel must be configured, with the MAXPIECESIZE set to 300 MB.
- B. The SBT channel must be configured, with the parallelism setting for the SBT device set to 3.
- C. The COMPATIBLE initialization parameter for the database instance must be set to at least 10.0.
- D. The SBT channel must be configured, with the default parallelism setting for the SBT device set to 1.

Answer: B

71. Which is the source used by Automatic SQL Tuning that runs as part of the AUTOTASK framework?

- A. SQL statements that are part of the AWR baseline only
- B. SQL statements based on the AWR top SQL identification
- C. SQL statements that are part of the available SQL Tuning Set (STS) only
- D. SQL statements that are available in the cursor cache and executed by a user other than SYS

Answer: B

72. View the Exhibit and examine the output.

You executed the following command to enable Flashback Data Archive on the EXCHANGE_RATE table:

```
ALTER TABLE exchange_rate FLASHBACK ARCHIVE;
```

What is the outcome of this command?

```
SQL> SELECT flashback_archive_name,status FROM
2   dba_flashback_archive
3   /

FLASHBACK_ARCHIVE_NAME STATUS
-----
FLA1
```

- A. The table uses the default Flashback Archive.
- B. The Flashback Archive is created on the SYSAUX tablespace.
- C. The Flashback Archive is created on the same tablespace where the tables are stored.

D. The command generates an error because no Flashback Archive name is specified and there is no default Flashback Archive.

Answer: D

73. View the Exhibit for some of the current parameter settings.

A user logs in to the HR schema and issues the following commands:

```
SQL> CREATE TABLE emp
```

```
(empno NUMBER(3),
```

```
ename VARCHAR2(20),
```

```
sal NUMBER(8,2));
```

```
SQL> INSERT INTO emp(empno,ename) VALUES(1,'JAMES');
```

At this moment, a second user also logs in to the HR schema and issues the following command:

```
SQL> ALTER TABLE emp MODIFY sal NUMBER(10,2);
```

What happens in the above scenario?

NAME	TYPE	VALUE
db_file_multiblock_read_count	integer	107
ddl_lock_timeout	integer	60
distributed_lock_timeout	integer	60
dml_locks	integer	748
lock_sga	boolean	FALSE
enable_ddl_logging	boolean	FALSE
resumable_timeout	integer	0

A. A deadlock is created.

B. The second user's command executes successfully.

C. The second user's session immediately produces the resource busy error.

D. The second user's session waits for a time period before producing the resource busy error.

Answer: D

74. To generate recommendations to improve the performance of a set of SQL queries in an application, you execute the following blocks of code:

```
BEGIN
    dbms_advisor.create_task(dbms_advisor.sqlaccess_advisor,'TASK1');
END;
/
BEGIN
    dbms_advisor.set_task_parameter('TASK1','ANALYSIS_SCOPE','ALL');
    dbms_advisor.set_task_parameter('TASK1','MODE','COMPREHENSIVE');
END;
/
BEGIN
    dbms_advisor.execute_task('TASK1')
    dbms_output.put_line(dbms_advisor.get_task_script('TASK1'));
END;
/
```

The blocks of code execute successfully; however, you do not get the required outcome.

What could be the reason?

- A. A template needs to be associated with the task.
- B. A workload needs to be associated with the task.
- C. The partial or complete workload scope needs to be associated with the task.
- D. The type of structures (indexes, materialized views, or partitions) to be recommended need to be specified for the task.

Answer: B

75. Identify three key features of ASM. (Choose three.)

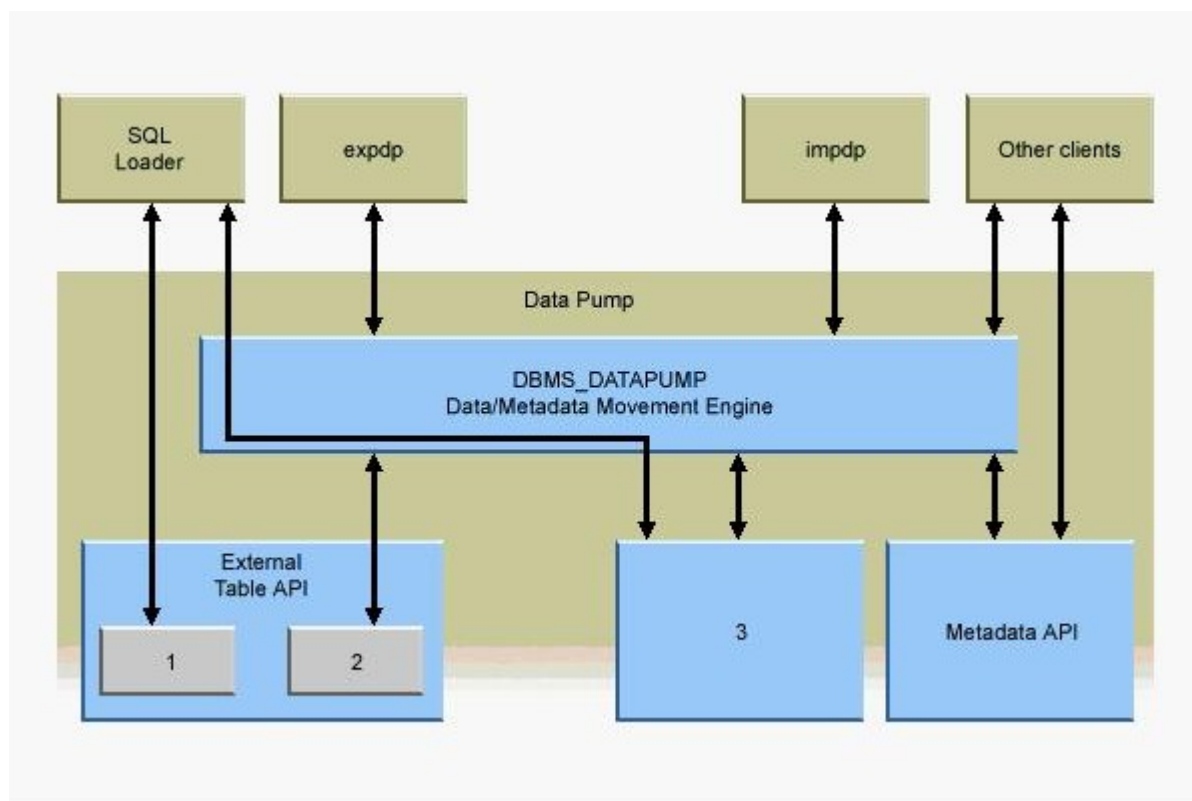

- A. file striping

- B. allocation unit mirroring
- C. automatic disk rebalancing
- D. automatic file size increment
- E. automatic undo management

Answer: ABC

76. View the Exhibit and examine the Data Pump architecture.

Identify the numbered components.

- A. 1 - Oracle Loader, 2 - Oracle Data Pump, 3 - Direct Path API
- B. 1 - Oracle Data Pump, 2 - Direct Path API, 3 - Oracle Loader
- C. 1 - Direct Path API, 2 - Oracle Loader, 3 - Oracle Data Pump
- D. 1 - Oracle Loader, 2 - Direct Path API, 3 - Oracle Data Pump

Answer: A

77. Which two statements regarding the Flashback Table feature are correct? (Choose two.)

- A. Flashback Table can be performed on system tables.
- B. Flashback Table operation does not shrink the segments.
- C. Flashback Table uses log mining to extract SQL_REDO and SQL_UNDO statements.
- D. Flashback Table operation acquires exclusive data manipulation language (DML) locks.

Answer: BD

78. You executed the following SQL statement to shrink the EMPLOYEES table segment stored in the EXAMPLE tablespace:

```
ALTER TABLE employees SHRINK SPACE CASCADE;
```

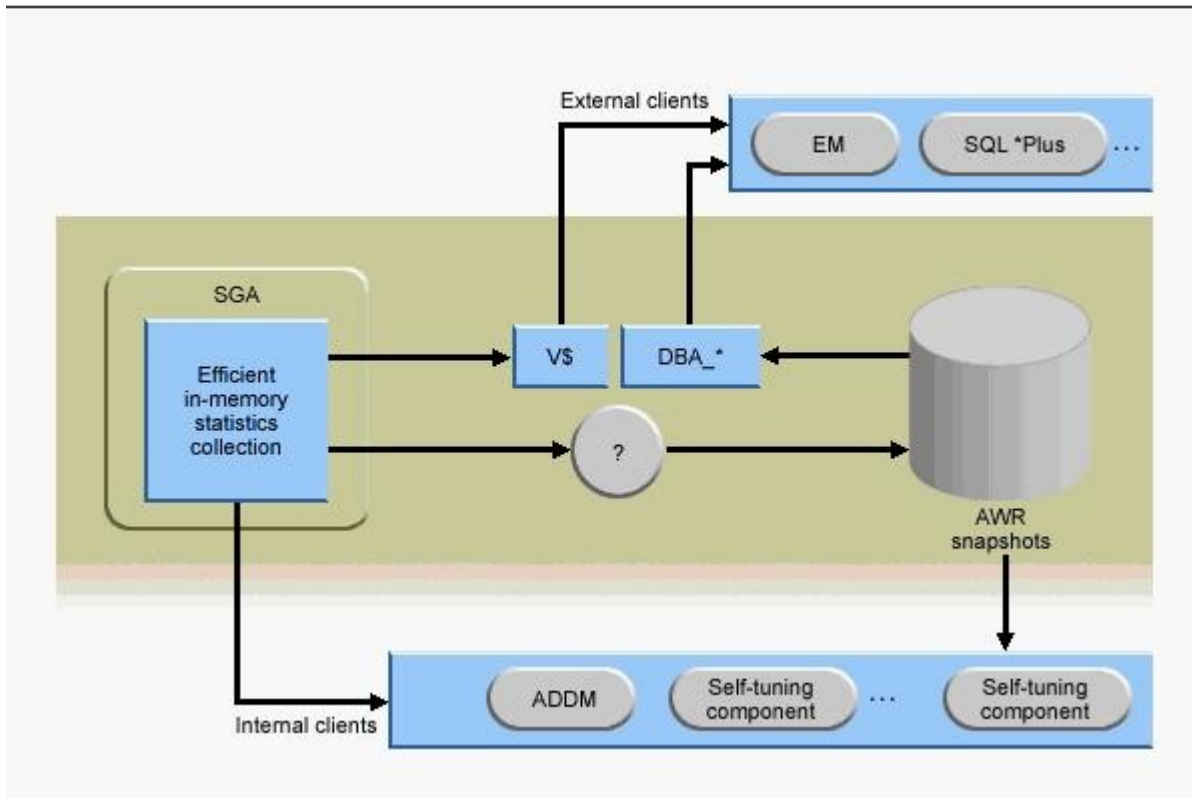

Which statement is correct in this scenario?

- A. The EMPLOYEES table will be changed to read-only mode during the shrink operation.
- B. The indexes created on the EMPLOYEES table will need to be rebuilt after the shrink operation is over.
- C. The shrink behavior will be cascaded to all dependent segments of the table that support a shrink operation.
- D. Data manipulation language (DML) operations will not be possible on the EMPLOYEES table during the COMPACTION phase of the shrink operation.

Answer: C

79. View the Exhibit.

As shown in the diagram, in-memory statistics are transferred to the disk at regular intervals. Which background process performs this activity?

- A. CKPT
- B. SMON
- C. MMON
- D. DBWR

Answer: C

80. View the Exhibits exhibit1 and exhibit2.

Both the processes use PROG_1 as the job template that is already available. The time taken by the jobs are recorded in the TEST_LOG table. While comparing the time taken to create the jobs, the process in exhibit1 takes less time than the process in exhibit2.

What is the reason for this?

```

DECLARE
  newjob sys.job;
  newjobarr sys.job_array;
  newjobname VARCHAR2(30);
BEGIN
  newjobarr := sys.job_array();
  newjobarr.extend(10);
  FOR j in 1..&1 LOOP
    FOR i IN 1..10 LOOP
      newjob := sys.job(job_name => 'LWTJK' || to_char(i) || '_' || to_char(j),
        job_style => 'LIGHTWEIGHT',
        job_template => 'PROG_1',
        enabled => TRUE
      );
      newjobarr(i) := newjob;
    END LOOP;
  END LOOP;
  INSERT INTO TEST_LOG
  VALUES('LWTJ', 'START', SYSTIMESTAMP);
  DBMS_SCHEDULER.CREATE_JOBS(newjobarr, 'TRANSACTIONAL');
  INSERT INTO TEST_LOG
  VALUES('LWTJ', 'END', SYSTIMESTAMP);
  END LOOP;
END;

```

```

DECLARE
  newjob sys.job;
  newjobarr sys.job_array;
  newjobname VARCHAR2(30);
BEGIN
  newjobarr := sys.job_array();
  newjobarr.extend(10);
  FOR j in 1..&1 LOOP
    FOR i IN 1..10 LOOP
      newjob := sys.job(job_name => 'REGJK' || to_char(i) || '_' || to_char(j),
        job_style => 'REGULAR',
        job_template => 'PROG_1',
        enabled => TRUE
      );
      newjobarr(i) := newjob;
    END LOOP;
  END LOOP;
  INSERT INTO TEST_LOG
  VALUES('REGJOB', 'START', SYSTIMESTAMP);
  DBMS_SCHEDULER.CREATE_JOBS(newjobarr, 'TRANSACTIONAL');
  INSERT INTO TEST_LOG
  VALUES('REGJOB', 'END', SYSTIMESTAMP);
  END LOOP;
END;

```

- A. It creates less metadata for the jobs.
- B. It creates jobs temporarily in memory only.
- C. It writes the job metadata to disk in compressed format.
- D. It updates several tables in the SYSTEM tablespace instead of creating new tables.

Answer: A

81. You issued the following command to mount the DATA disk group in restricted mode:

```
ALTER DISKGROUP data MOUNT RESTRICT;
```

What is the implication of this command?

- A. A disk in a disk group can be taken offline.
- B. A new disk cannot be added to a disk group.
- C. The client RDBMS instance can access the file as a read-only file.
- D. The client RDBMS instance cannot access the files in the disk group.

Answer: D

82. Which statements are true regarding the system-defined moving window baseline in Oracle Database 11g? (Choose all that apply.)

- A. It does not allow you to change the moving window size.
- B. Adaptive threshold functionalities use it by default to compute statistics.
- C. It is created by default with the window size being equal to the AWR retention time.
- D. It is created when the first snapshot is collected by the Automatic Workload Repository (AWR).

Answer: BC

83. Which three are the valid statements in relation to SQL plan baselines? (Choose three.)

- A. The plans can be manually loaded to the SQL plan baseline.
- B. The plans in the SQL plan baseline are verified and accepted plans.
- C. The plans generated for every SQL statement are stored in the SQL plan baseline by default.
- D. The plan baselines are stored temporarily in the memory as long as the database instance is running.
- E. For the SQL plan baselines to be accessible to the optimizer, the SYSAUX tablespace must be online.

Answer: ABE

84. Identify the three predefined server-generated alerts. (Choose three.)

- A. Drop User

- B. Tablespace Space Usage
- C. Resumable Session Suspended
- D. Recovery Area Low On Free Space
- E. SYSTEM Tablespace Size Increment

Answer: BCD

85. Which two statements are true regarding Health Monitor checks in Oracle Database 11g? (Choose two.)

- A. Health Monitor checks are always initiated manually when there is some critical error.
- B. Health Monitor checks can be used to scan the contents of the redo log and archive logs for accessibility and corruption.
- C. Health Monitor checks can be used to verify the contents of dictionary entries for each dictionary object and fix it automatically.
- D. Health Monitor checks can be used to verify the integrity of database files and report failures if these files are inaccessible, corrupt, or inconsistent.

Answer: BD

86. The Automatic Database Diagnostic Monitor (ADDM) analysis runs every 60 minutes on your database. Your database is facing a series of interrelated problems over a period of two hours. You need to ensure that the ADDM analysis is run over a time span of two hours in future. What would you do?

- A. Create two custom ADDM tasks.
- B. Modify the AWR snapshot time interval to two hours.
- C. Create a new scheduler window for a time period of two hours.
- D. Modify the Automatic Workload Repository (AWR) snapshot retention period to two hours.

Answer: B

87. Which two statements are true regarding hot patching? (Choose two.)

- A. It requires relinking of the Oracle binary.
- B. It does not require database instance shutdown.
- C. It can detect conflicts between two online patches.

- D. It is available for installing all patches on all platforms.
- E. It works only in a single database instance environment.

Answer: BC

88. You are in the process of creating a virtual private catalog in your Oracle Database 11g database. The PROD1, PROD2, and PROD3 Oracle Database 10g databases are registered in the base recovery catalog. The database user who owns the base recovery catalog is CATOWNER. CATOWNER executes the following command to grant privileges to a new user VPC1 using Oracle Database 11g RMAN executables:

```
RMAN> GRANT CATALOG FOR DATABASE prod1, prod2 TO vpc1;
```

Then you issue the following commands:

```
RMAN> CONNECT CATALOG vpc1/oracle@catdb;
```

```
RMAN> SQL "EXEC catowner.dbms_rcvcat.create_virtual_catalog;"
```

What is the outcome of the above commands?

- A. They execute and create a virtual catalog for pre-Oracle 11g clients.
- B. They produce an error because PROD1 and PROD2 databases belong to the older version.
- C. They produce an error because you need to connect as CATOWNER to execute this packaged procedure.
- D. They produce an error because you need to connect to the target database to execute this packaged procedure.

Answer: A

89. Your organization decided to upgrade the existing Oracle 10g database to Oracle 11g database in a multiprocessor environment. At the end of the upgrade, you observe that the DBA executes the following script:

SQL> @utlrp.sql

What is the significance of executing this script?

- A. It performs parallel recompilation of only the stored PL/SQL code.
- B. It performs sequential recompilation of only the stored PL/SQL code.
- C. It performs parallel recompilation of any stored PL/SQL as well as Java code.
- D. It performs sequential recompilation of any stored PL/SQL as well as Java code.

Answer: C

90. Evaluate the following command:

```
SQL> CREATE TABLE design_data (id NUMBER,  
                                doc CLOB)  
                                LOB(doc) STORE AS SECUREFILE(DEDUPLICATE);
```

Which statement is true regarding the above command?

- A. The LOB values are automatically compressed.
- B. The LOB values are cached by default in the buffer cache.
- C. The LOB values are automatically stored in encrypted mode.
- D. All LOB data that is identical in two or more rows in a LOB column share the same data blocks.

Answer: D

91. Which tasks can be accomplished using the DBMS_LOB.SETOPTIONS procedure?

- A. only encryption and compression settings for all SecureFile LOBs
- B. only encryption and deduplication settings for only SecureFile CLOBs
- C. deduplication, encryption, and compression settings for all SecureFile LOBs
- D. deduplication, encryption, and compression settings only for SecureFile CLOBs

Answer: C

92. Your database initialization parameter file has the following entry:

SEC_MAX_FAILED_LOGIN_ATTEMPTS=3

Which statement is true regarding this setting?

- A. It is enforced only if the password profile is enabled for the user.
- B. It locks the user account after the specified number of attempts.
- C. It drops the connection after the specified number of login attempts fail for any user.
- D. It drops the connection after the specified number of login attempts fail only for users who have the SYSDBA privilege.

Answer: C

93. You plan to set up the Automatic Workload Repository (AWR) baseline metric thresholds for a moving window baseline. Which action would you take before performing this task?

- A. Compute the baseline statistics.
- B. Take an immediate AWR snapshot.
- C. Decrease the window size for the baseline.
- D. Decrease the expiration time for the baseline.

Answer: A

94. Which statement describes the significance of the CHANGE FAILURE command in RMAN? (Choose all that apply.)

- A. It is used to explicitly close the open failures.
- B. It is used to execute the advised repair script.
- C. It is used to change failure priority only for the CRITICAL priority.
- D. It is used to change failure priority only for HIGH or LOW priorities.
- E. It is used to inform the database about the repair after the repair script executes.

Answer: AD

95. Evaluate the following SQL statement used to create the PRODUCTS table:

```
CREATE TABLE products
(product_id NUMBER(3) PRIMARY KEY,
 product_desc VARCHAR2(25),
 qty NUMBER(8,2),
 rate NUMBER(10,2),
 total_value AS ( qty * rate))
PARTITION BY RANGE (total_value)
(PARTITION p1 VALUES LESS THAN (100000),
 PARTITION p2 VALUES LESS THAN (150000),
 PARTITION p3 VALUES LESS THAN (MAXVALUE))
COMPRESS FOR ALL OPERATIONS;
```

Which statement is true regarding this command?

- A. It executes successfully but partition pruning cannot happen for this partition key.
- B. It produces an error because the TOTAL_VALUE column cannot be used as a partition key.
- C. It produces an error because compression cannot be used for the TOTAL_VALUE partition key.
- D. It executes successfully but the values in the TOTAL_VALUE column would not be physically stored in the partitions.

Answer: D

96. Which two activities are NOT supported by the Data Recovery Advisor? (Choose two.)

- A. Diagnose and repair a data file corruption offline.
- B. Diagnose and repair a data file corruption online.
- C. Diagnose and repair failures on a standby database.
- D. Recover from failures in the Real Application Cluster (RAC) environment.

Answer: CD

97. You are using Recovery Manager (RMAN) to perform backups. In which three situations would you perform a compressed backup? (Choose three.)

- A. You are backing up to tape and your tape device performs its own compression.

- B. You are making image copies, and you have not enabled tablespace compression.
- C. You are using disk-based backups and disk space in your Flash Recovery Area, or other disk-based backup destinations are limited.
- D. You are performing your backups to some device over a network where reduced network bandwidth is more important than CPU usage.
- E. You are using some archival backup media, such as CD or DVD, where reducing backup sizes saves media costs and archival storage.

Answer: CDE

98. You upgraded Oracle Database 10g to Oracle Database 11g. How would this affect the existing users' passwords?

- A. All passwords automatically become case-sensitive.
- B. All passwords remain non-case-sensitive till they are changed.
- C. All passwords remain non-case-sensitive and cannot be changed.
- D. All passwords remain non-case-sensitive until their password attribute in the profile is altered.

Answer: B

99. Evaluate the following statements:

```
CREATE TABLE purchase_orders
(po_id NUMBER(4),
 po_date TIMESTAMP,
 supplier_id NUMBER(6),
 po_total NUMBER(8,2),
 CONSTRAINT order_pk PRIMARY KEY(po_id))
PARTITION BY RANGE(po_date)
(PARTITION Q1 VALUES LESS THAN (TO_DATE('1-apr-2007' d-mon-yyyy) ),
 PARTITION Q2 VALUES LESS THAN (TO_DATE('1-jul-2007' d-mon-yyyy) ),
 PARTITION Q3 VALUES LESS THAN (TO_DATE('1-oct -2007' d-mon-yyyy) ),
 PARTITION Q4 VALUES LESS THAN (TO_DATE('1-jan-2008' d-mon-yyyy )));
```

```
CREATE TABLE purchase_order_items
(po_id NUMBER(4) NOT NULL,
product_id NUMBER(6) NOT NULL,
unit_price NUMBER(8,2),
quantity NUMBER(8),
CONSTRAINT po_items_fk
FOREIGN KEY (po_id) REFERENCES purchase_orders(po_id))
PARTITION BY REFERENCE(po_items_fk);
```

What are the two consequences of the above statements? (Choose two.)

- A. Partitions of PURCHASE_ORDER_ITEMS have system-generated names.
- B. Both PURCHASE_ORDERS and PURCHASE_ORDER_ITEMS tables are created with four partitions each.
- C. Partitions of the PURCHASE_ORDER_ITEMS table exist in the same tablespaces as the partitions of the PURCHASE_ORDERS table.
- D. The PURCHASE_ORDER_ITEMS table inherits the partitioning key from the parent table by automatically duplicating the key columns.
- E. Partition maintenance operations performed on the PURCHASE_ORDER_ITEMS table are automatically reflected in the PURCHASE_ORDERS table.

Answer: BC

100. Which method would you use to undo the changes made by a particular transaction without affecting the changes made by other transactions?

- A. point-in-time recovery
- B. execute the ROLLBACK command with transaction number
- C. flashback the database to before the transaction was committed
- D. determine all the necessary undo SQL statements from FLASHBACK_TRANSACTION_QUERY and use them for recovery

Answer: D

101. Which three are the valid statements in relation to SQL plan baselines? (Choose three.)

- A. The plans can be manually loaded to the SQL plan baseline.
- B. The plans in the SQL plan baseline are verified and accepted plans.
- C. The plans generated for every SQL statement are stored in the SQL plan baseline by default.
- D. The plan baselines are stored temporarily in the memory as long as the database instance is running.
- E. For the SQL plan baselines to be accessible to the optimizer, the SYSAUX tablespace must be online.

Answer: ABE

102. You executed the following command to drop a user:

```
DROP USER scott CASCADE;
```

Which two statements regarding the above command are correct? (Choose two.)

- A. All the objects of scott are moved to the Recycle Bin.
- B. Any objects in the Recycle Bin belonging to scott are purged.
- C. All the objects owned by scott are permanently dropped from the database.
- D. All the objects of scott in the Recycle Bin must be purged before executing the DROP command.
- E. Any objects in the Recycle Bin belonging to scott will not be affected by the above DROP command.

Answer: BC

103. Which two statements are true regarding the SQL Repair Advisor? (Choose two.)

- A. The SQL Repair Advisor can be invoked to tune the performance of the regressed SQL statements.
- B. The SQL Repair Advisor can be invoked even when the incident is not active for a SQL statement crash.
- C. The SQL Repair Advisor is invoked by the Health Monitor when it encounters the problematic SQL statement.
- D. The DBA can invoke the SQL Repair Advisor when he or she receives an alert generated when a SQL statement crashes and an incident is created in the ADR.

Answer: BD

104. What is the advantage of setting the ASM-preferred mirror read for the Stretch cluster configuration?

- A. It improves resync operations.
- B. This feature enables much faster file opens.
- C. It improves performance as fewer extent pointers are needed in the shared pool.
- D. It improves performance by reading from a copy of an extent closest to the node.

Answer: D

105. You want to convert your existing non-ASM files to ASM files for the database PROD. Which method or command would you use to accomplish this task?

- A. Data Pump Export and Import
- B. conventional export and import
- C. the CONVERT command of RMAN
- D. the BACKUP AS COPY.. command of RMAN

Answer: D

106. To control the execution of a server process when it is receiving bad packets from a potentially malicious client, you set the SEC_PROTOCOL_ERROR_FURTHER_ACTION initialization parameter as follows:

```
SQL> ALTER SYSTEM SET SEC_PROTOCOL_ERROR_FURTHER_ACTION = Drop,10;
```

What is the significance of this setting?

- A. It terminates the client connection after 10 bad packets and the client cannot reconnect to the same instance.
- B. It terminates the client connection after 10 bad packets but the client can still reconnect, and attempt the same operation again.
- C. It terminates the client connection 10 seconds after receiving a bad packet and the client cannot reconnect to the same instance.
- D. It terminates the client connection after receiving a bad packet and the client can reconnect to the

same instance after 10 minutes.

Answer: B

107. Evaluate the following code:

```
SQL>VARIABLE task_name VARCHAR2(255);
SQL>VARIABLE sql_stmt VARCHAR2(4000);
SQL>BEGIN
    :sql_stmt := 'SELECT COUNT(*) FROM customers
                WHERE cust_state_province = "CA"';
    :task_name := 'MY_QUICKTUNE_TASK';
    DBMS_ADVISOR.QUICK_TUNE(DBMS_ADVISOR.SQLACCESS_ADVISOR,
                          :task_name, :sql_stmt);
END;
```

What is the outcome of this block of code?

- A. It creates a task and workload, and executes the task.
- B. It creates a task and workload but does not execute the task.
- C. It produces an error because a template has not been created.
- D. It produces an error because the SQL Tuning Set has not been created.

Answer: A

108. Which three statements are true regarding persistent lightweight jobs? (Choose three.)

- A. The user cannot set privileges on persistent lightweight jobs.
- B. The use of a template is mandatory to create persistent lightweight jobs.
- C. Persistent lightweight jobs modify several tables in the data dictionary to generate a lot of redo.
- D. Persistent lightweight jobs are useful when users need to create a large number of jobs in a short time.
- E. Persistent lightweight jobs are useful when users need to create a small number of jobs that run infrequently.

Answer: ABD

109. Which two statements are true regarding the Automatic Diagnostic Repository (ADR) in Oracle Database 11g? (Choose two.)

- A. A single ADR can support multiple ADR homes for different database instances.
- B. The alert files are stored in XML file format in the TRACE directory of each ADR home.
- C. If the environmental variable ORACLE_BASE is set, then DIAGNOSTIC_DEST is set to \$ORACLE_BASE.
- D. The BACKGROUND_DUMP_DEST initialization parameter overrides the DIAGNOSTIC_DEST initialization parameter for the location of the alert log file.

Answer: AC

110. Which two statements about Oracle Direct Network File System (NFS) are true? (Choose two.)

- A. It bypasses the OS file system cache.
- B. A separate NFS interface is required for use across Linux, UNIX, and Windows platforms.
- C. It uses the operating system kernel NFS layer for user tasks and network communication modules.
- D. File systems need not be mounted by the kernel NFS system when being served through Direct NFS.
- E. Oracle Disk Manager can manage NFS on its own, without using the operating system kernel NFS driver.

Answer: AE

111. Which two initialization parameters would you set to enable Automatic Shared Memory Management? (Choose two.)

- A. set SHARED_POOL_SIZE to zero
- B. set STATISTICS_LEVEL to BASIC
- C. set SGA_TARGET to a non-zero value
- D. set DB_CACHE_SIZE to a non-zero value
- E. set STATISTICS_LEVEL to TYPICAL or ALL

Answer: CE

112. Which client requests to the database can be captured as a part of the workload capture? (Choose

all that apply.)

- A. flashback query
- B. distributed transactions
- C. logging in and logging out of sessions
- D. all DDL statements having bind variables
- E. direct path load of data from external files

Answer: CD

113. You are managing an Oracle Database 11g instance and an Oracle Database 10g instance on the same machine. Both instances use the ASM instance as storage. Which statements regarding the ASM disk group compatibility attributes are true in this scenario? (Choose all that apply.)

- A. ASM compatibility controls which features for the ASM will be enabled.
- B. RDBMS compatibility and the database version determines whether a database instance can mount the ASM disk group.
- C. The RDBMS compatibility settings for a disk group control the format of data structures for ASM metadata on the disk.
- D. The database-compatibility version settings for each instance must be greater than or equal to the RDBMS compatibility of all ASM disk groups used by that database instances.

Answer: ABD

114. Which three statements about performance analysis by SQL Performance Analyzer are true? (Choose three.)

- A. It detects changes in SQL execution plans.
- B. It produces results that can be used to create the SQL plan baseline.
- C. The importance of SQL statements is based on the size of the objects accessed.
- D. It generates recommendations to run SQL Tuning Advisor to tune regressed SQL statements.
- E. It shows only the overall impact on workload and not the net SQL impact on workload.

Answer: ABD

115. You have the following requirements in relation to the detection of block corruption for your database

instance:

1. Check for logical self-consistency of data blocks when modified in memory.
2. Checksums are calculated before and after the block change.
3. Checks are performed for the lost writes to the physical standby database.

Which method would help you perform the above checks automatically?

- A. Set the DB_SECUREFILE parameter to PERMITTED.
- B. Set the DB_ULTRA_SAFE parameter to DATA_ONLY.
- C. Set the DB_LOCK_CHECKSUM parameter to TYPICAL.
- D. Set the DB_LOST_WRITE_PROTECT parameter to TYPICAL.

Answer: B

116. You have 100 segments in the USERS tablespace. You realize that the USERS tablespace is running low on space. You can use Segment Advisor to _____.

- A. identify the segments that you should shrink
- B. modify the storage parameters for the tablespace
- C. automatically shrink the segments with unused space
- D. check the alerts generated for the tablespace that is running low on space

Answer: A

117. You are using Recovery Manager (RMAN) to perform backups. In which three situations would you perform a compressed backup? (Choose three.)

- A. You are backing up to tape and your tape device performs its own compression.
- B. You are making image copies, and you have not enabled tablespace compression.
- C. You are using disk-based backups and disk space in your Flash Recovery Area, or other disk-based backup destinations are limited.
- D. You are performing your backups to some device over a network where reduced network bandwidth is more important than CPU usage.
- E. You are using some archival backup media, such as CD or DVD, where reducing backup sizes saves

media costs and archival storage.

Answer: CDE

118. You have a range-partitioned table in your database. Each partition in the table contains the sales data for a quarter. The partition related to the current quarter is modified frequently and other partitions undergo fewer data manipulations. The preferences for the table are set to their default values. You collect statistics for the table using the following command in regular intervals:

```
SQL> EXECUTE DBMS_STATS.GATHER_TABLE_STATS('SH','SALES',GRANULARITY=>'GLOBAL');
```

You need statistics to be collected more quickly. What can you do to achieve this?

- A. Set DYNAMIC_SAMPLING to level 4.
- B. Set the STATISTICS_LEVEL parameter to BASIC.
- C. Set the INCREMENTAL value to TRUE for the partition table.
- D. Increase the value of STALE_PERCENT for the partition table.

Answer: C

119. Which two statements regarding the Flashback Table feature are correct? (Choose two.)

- A. Flashback Table can be performed on system tables.
- B. Flashback Table operation does not shrink the segments.
- C. Flashback Table uses log mining to extract SQL_REDO and SQL_UNDO statements.
- D. Flashback Table operation acquires exclusive data manipulation language (DML) locks.

Answer: BD

120. Evaluate the following command:

```
SQL>ALTER SYSTEM SET db_securefile = 'IGNORE';
```

What is the impact of this setting on the usage of SecureFiles?

- A. It forces BasicFiles to be created even if the SECUREFILE option is specified to create the LOB.

- B. It forces SecureFiles to be created even if the BASICFILE option is specified to create the LOB.
- C. It does not allow the creation of SecureFiles and generates an error if the SECUREFILE option is specified to create the LOB.
- D. It ignores the SECUREFILE option only if a Manual Segment Space Management tablespace is used and creates a BasicFile.

Answer: A

121. You plan to collect the Automatic Workload Repository (AWR) data every Monday morning for a month. You want Oracle Database to automatically create a baseline every Monday and remove the old baseline. What is the correct action to achieve this?

- A. Create a repeating baseline template.
- B. Insert a finding directive for future ADDM tasks.
- C. Create and populate a SQL Tuning Set from the AWR on every Monday.
- D. Change the RETENTION setting for the AWR snapshots to 7 days on Monday.

Answer: A

122. View the following SQL statements:

Transaction T1

```
INSERT INTO hr.regions VALUES (5,'Pole');
```

```
COMMIT;
```

Transaction T2

```
UPDATE hr.regions SET region_name='Poles' WHERE region_id = 5;
```

```
COMMIT;
```

Transaction T3

```
UPDATE hr.regions SET region_name='North and South Poles' WHERE  
region_id = 5;
```

You want to back out transaction T2. Which option would you use?

- A. It is possible, but transaction T3 also backs out.
- B. It is possible with the NOCASCADE_FORCE option.
- C. It is possible with the NONCONFLICT_ONLY option.
- D. It is not possible because it has conflicts with transaction T3.

Answer: B

123. You enabled Flashback Data Archive on the INVENTORY table. Which DDL operation is supported on the table after enabling Flashback Data Archive?

- A. Drop the table.
- B. Partition the table
- C. Truncate the table.
- D. Add a column to the table.
- E. Rename a column in the table.

Answer: D

124. On which two database objects can the VERSIONS clause of the Flashback Versions Query be used?
(Choose two.)

- A. fixed tables
- B. heap tables
- C. external tables
- D. temporary tables
- E. Index-Organized Tables (IOTs)

Answer: BE

125. You installed Oracle Database 11g and are performing a manual upgrade of the Oracle9i database.
As a part of the upgrade process, you execute the following script:

SQL>@utlu111i.sql

Which statement about the execution of this script is true?

- A. It must be executed from the Oracle Database 11g environment.
- B. It must be executed only after the SYSAUX tablespace has been created.
- C. It must be executed from the environment of the database that is being upgraded.
- D. It must be executed only after AUTOEXTEND is set to ON for all existing tablespaces.
- E. It must be executed from both the Oracle Database 11g and Oracle Database 9i environments.

Answer: C

126. Immediately after adding a new disk to or removing an existing disk from an ASM instance, you find that the performance of the database goes down initially until the time the addition or removal process is completed, and then gradually becomes normal.

Which two activities would you perform to maintain a consistent performance of the database while adding or removing disks? (Choose two.)

- A. Define the POWER option while adding or removing the disks.
- B. Increase the number of ARB processes by setting up a higher value for ASM_POWER_LIMIT.
- C. Increase the number of DBWR processes by setting up a higher value for DB_WRITER_PROCESSES.
- D. Increase the number of slave database writer processes by setting up a higher value for DBWR_IO_SLAVES.

Answer: AB

127. You executed the following command:

```
RMAN> RECOVER COPY OF DATAFILE '/u01/app/oracle/oradata/orcl/users01.dbf';
```

Which statement regarding the above command is correct?

- A. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the image copy.
- B. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the last incremental backup.
- C. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are updated with all changes up to incremental backup SCN.
- D. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are recovered using the above command if data file recovery fails.

Answer: C

128. You are working on the APPDB database as a DBA. The database has a default Flashback Data Archive DFLA1 created on it.

You issued the following command to drop the Flashback Archive FLA1:

```
DROP FLASHBACK ARCHIVE fla1;
```

What is the effect of this command?

- A. The tablespace having Flashback Archive is dropped.
- B. The Flashback Data Archive FLA1 is dropped only if it is empty.
- C. The Flashback Data Archive FLA1 and historical data are dropped.
- D. The Flashback Data Archive FLA1 is dropped after moving the existing data in it to the default Flashback Archive.

Answer: C

129. Which are the prerequisites for performing flashback transactions on your database? (Choose all that apply.)

- A. Supplemental log must be enabled.
- B. Supplemental log must be enabled for the primary key.
- C. Undo retention guarantee for the database must be configured.
- D. Execute permission on the DBMS_FLASHBACK package must be granted to the user.

Answer: ABD

130. You have applications that have frequently executed queries, and produce small and static result sets.

You configure the `sqlnet.ora` file in the client machine to set a nonzero value for the `OCI_RESULT_CACHE_MAX_SIZE` parameter.

What is the purpose of this configuration?

- A. to avoid round trips to the server by enabling caching of query results in client memory
- B. to improve performance by storing a copy of the data from the private SQL area of the PGA
- C. to enhance the query performance by creating a cache in the client memory for sorting operations
- D. to avoid the storing of query plans and results in the server by creating a cache in the client memory

Answer: A

131. Which statement is true for enabling Enterprise Manager Support Workbench in Oracle Database 11g to upload the physical files generated by Incident Packaging Service (IPS) to MetaLink?

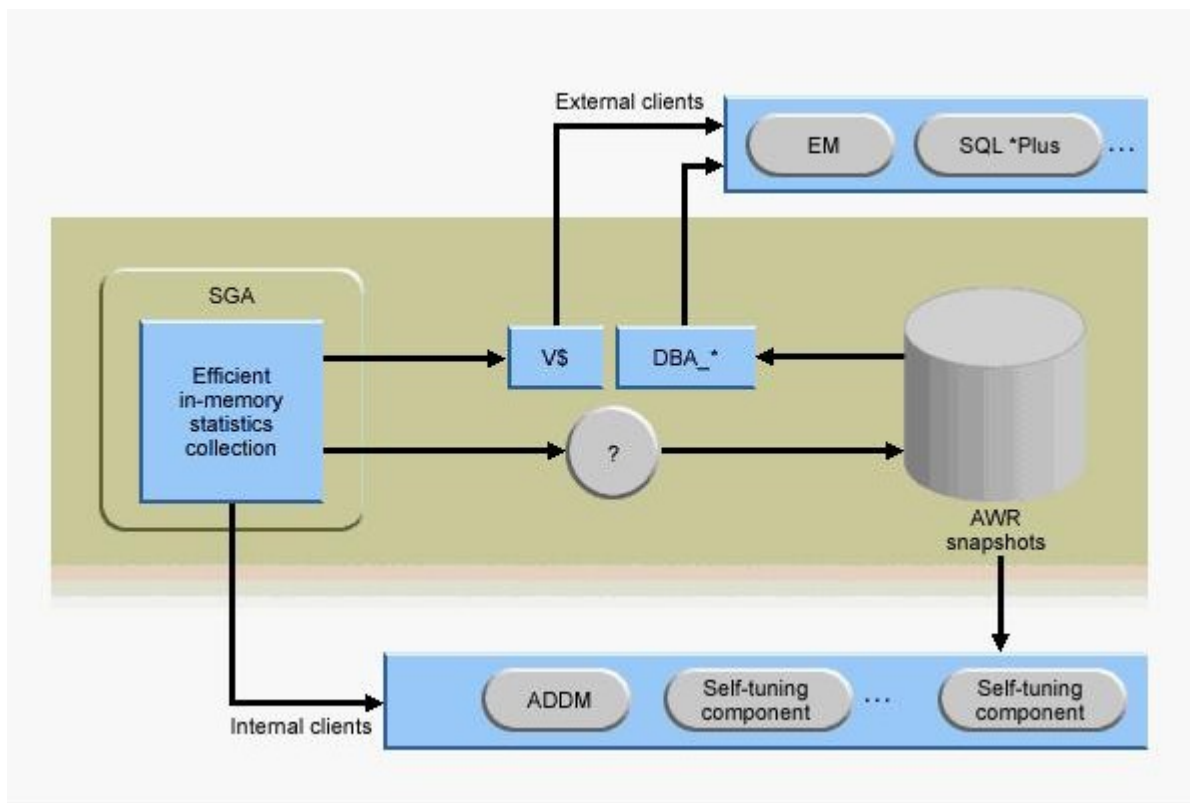

- A. The database must be running in ARCHIVELOG mode.
- B. No special setup is required, and the feature is enabled by default.
- C. The path for the Automatic Diagnostic Repository (ADR) must be configured with the `DIAGNOSTIC_DEST` initialization parameter.
- D. The Enterprise Manager Support Workbench can be enabled only if the background process manageability monitor (MMON) is configured.
- E. Select the Enable option in the Oracle Configuration Manager Registration window during the installation of the Oracle Database 11g software, provide valid MetaLink credentials and select license agreement.

Answer: E

132. View the Exhibit.

As shown in the diagram, in-memory statistics are transferred to the disk at regular intervals. Which

background process performs this activity?

- A. CKPT
- B. SMON
- C. MMON
- D. DBWR

Answer: C

133. What two statements are true regarding the recommendations received from the SQL Access Advisor? (Choose two.)

- A. It can recommend partitioning only on tables that have at least 10,000 rows.
- B. It cannot generate recommendations that support multiple workload queries.
- C. It can recommend only B-tree indexes and not bitmap or function-based indexes.
- D. It can recommend partitioning on tables provided that the workloads have some predicates and joins on the columns of the NUMBER or DATE type.

Answer: AD

134. Examine the following command:

```
ALTER DISKGROUP data MOUNT FORCE;
```

In which scenario can you use the above command to mount the disk group?

- A. when ASM disk goes offline
- B. when one or more ASM files are dropped
- C. when some disks in a disk group are offline
- D. when some disks in a failure group for a disk group are rebalancing

Answer: C

135. You executed the following SQL statement to shrink the EMPLOYEES table segment stored in the EXAMPLE tablespace:

```
ALTER TABLE employees SHRINK SPACE CASCADE;
```

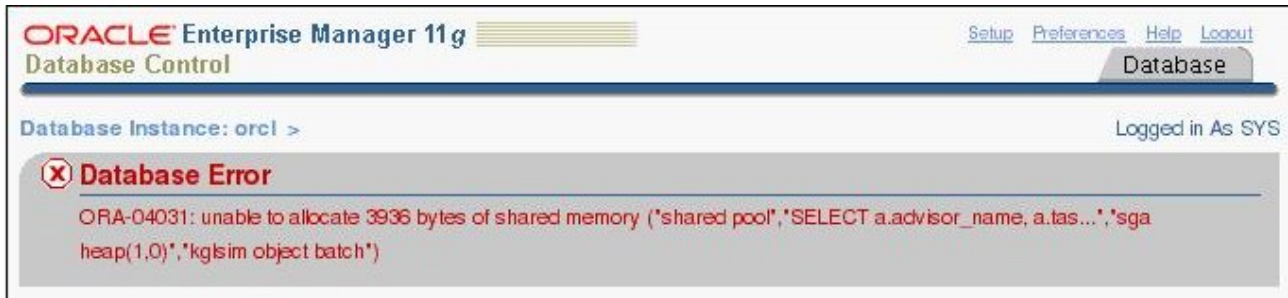

Which statement is correct in this scenario?

- A. The EMPLOYEES table will be changed to read-only mode during the shrink operation.
- B. The indexes created on the EMPLOYEES table will need to be rebuilt after the shrink operation is over.
- C. The shrink behavior will be cascaded to all dependent segments of the table that support a shrink operation.
- D. Data manipulation language (DML) operations will not be possible on the EMPLOYEES table during the COMPACTION phase of the shrink operation.

Answer: C

136. View the Exhibit to observe the error.

You receive this error regularly and have to shut down the database instance to overcome the error. What can the solution be to reduce the chance of this error in future, when implemented?

- A. locking the SGA in memory
- B. automatic memory management
- C. increasing the value of SGA_MAX_SIZE
- D. setting the PRE_PAGE_SGA parameter to TRUE

Answer: B

137. You set the following parameters in the parameter file and restarted the database:

```
MEMORY_MAX_TARGET=0
MEMORY_TARGET=500M
PGA_AGGREGATE_TARGET=90M
SGA_TARGET=270M
```

Which two statements are true regarding these parameters after the database instance is restarted?
(Choose two.)

- A. The MEMORY_MAX_TARGET parameter is automatically set to 500 MB.
- B. The value of the MEMORY_MAX_TARGET parameter remains zero till it is changed manually.
- C. The PGA_AGGREGATE_TARGET and SGA_TARGET parameters are automatically set to zero.
- D. The lower bounds of PGA_AGGREGATE_TARGET and SGA_TARGET parameters are set to 90 MB and 270 MB, respectively.

Answer: AD

138. You perform the following activities during the database upgrade from Oracle Database 10g to Oracle Database 11g:

1. Capture plans for a SQL workload into a SQL Tuning Set (STS) before upgrade.
2. Load these plans from the STS into the SQL plan baseline immediately after the upgrade.

What is the reason for performing these activities?

- A. to minimize plan regression due to the use of a new optimizer version
- B. to completely avoid the use of new plans generated by a new optimizer version
- C. to prevent plan capturing when the SQL statement is executed after the database upgrade
- D. to keep the plan in the plan history so that it can be used when the older version of the optimizer is used

Answer: A

139. Which two statements are true regarding Health Monitor checks in Oracle Database 11g? (Choose two.)

- A. Health Monitor checks are always initiated manually when there is some critical error.
- B. Health Monitor checks can be used to scan the contents of the redo log and archive logs for accessibility and corruption.
- C. Health Monitor checks can be used to verify the contents of dictionary entries for each dictionary object and fix it automatically.
- D. Health Monitor checks can be used to verify the integrity of database files and report failures if these files are inaccessible, corrupt, or inconsistent.

Answer: BD

140. The Automatic Database Diagnostic Monitor (ADDM) analysis runs every 60 minutes on your database. Your database is facing a series of interrelated problems over a period of two hours. You need to ensure that the ADDM analysis is run over a time span of two hours in future. What would you do?

- A. Create two custom ADDM tasks.
- B. Modify the AWR snapshot time interval to two hours.
- C. Create a new scheduler window for a time period of two hours.
- D. Modify the Automatic Workload Repository (AWR) snapshot retention period to two hours.

Answer: B

141. View the Exhibit exhibit1 to observe the maintenance window property.

View the Exhibit exhibit2 to examine the output of the query.

Which two statements describe the conclusions? (Choose two.)

ORACLE Enterprise Manager 11g Database Control

Database Instance: orcl > Scheduler Windows > View Window: TUESDAY_WINDOW

Logged in As SYS

Name **TUESDAY_WINDOW**

Resource Plan **DEFAULT_MAINTENANCE_PLAN**

Enabled **TRUE**

Priority **LOW**

Description **Tuesday window for maintenance tasks**

Schedule

Repeat **By Weeks**

Interval (Weeks) **1**

Days of Week **Tuesday**

Repeat Time **Hour:10 Minute:00 Second:00 PM**

Duration (min) **0 hour(s) 20 minute(s)**

Available to Start

Not Available After

```
SQL> SELECT client_name,
2      mean_job_duration,
3      resource_percentage
4      FROM DBA_AUTOTASK_CLIENT;
```

CLIENT_NAME	MEAN_JOB_DURATION	RESOURCE_PERCENTAGE
auto optimizer stats collection	+0000000000 00:18:41.000000000	25
auto space advisor	+0000000000 00:02:36.666666666	25
sql tuning advisor	+0000000000 00:04:36.500000000	25

- A. The window duration should be increased.
- B. RESOURCE_PERCENTAGE should be increased.
- C. RESOURCE_PERCENTAGE should be decreased.
- D. The repeat time for the window should be decreased.

Answer: AB

142. While tuning a SQL statement, the SQL Tuning Advisor finds an existing SQL profile for the statement that has stale statistics available. What would the optimizer do in this situation?

- A. It updates the existing SQL profiles with current statistics.
- B. It makes the statistics information available to GATHER_STATS_JOB.
- C. It initiates the statistics collection process by running GATHER_STATS_JOB.
- D. It logs a warning message in the alert log so that the DBA can perform statistics collection manually.

Answer: B

143. In which two aspects does hot patching differ from conventional patching? (Choose two.)

- A. It consumes more memory compared with conventional patching.
- B. It can be installed and uninstalled via OPatch unlike conventional patching.
- C. It takes more time to install or uninstall compared with conventional patching.
- D. It does not require down time to apply or remove unlike conventional patching.
- E. It is not persistent across instance startup and shutdown unlike conventional patching.

Answer: AD

144. In which cases is reference partitioning effective in enhancing performance?

- A. It is effective only in partition pruning.
- B. It is effective only in partitionwise joins provided that the query predicates are different from the partitioning key.
- C. It is effective in both partition pruning as well as partitionwise joins provided that the query predicates are identical to the partitioning key.
- D. It is effective in both partition pruning as well as partitionwise joins irrespective of whether the query predicates are different from or identical to the partitioning key.

Answer: D

145. Which statement is true regarding online redefinition for the migration of BasicFile LOBs to SecureFile LOBs?

- A. It cannot be done in parallel.
- B. It can be done at the table level or partition level.
- C. It does not require additional storage because the operation is done online.
- D. Local and global indexes are maintained automatically during the operation.

Answer: B

146. While deploying a new application module, the software vendor ships the application software along with appropriate SQL plan baselines for the new SQLs being introduced. Which two statements describe the consequences? (Choose two.)

- A. The plan baselines can be evolved over time to produce better performance.
- B. The newly generated plans are directly placed into the SQL plan baseline without being verified.
- C. The new SQL statements initially run with the plans that are known to produce good performance under standard test configuration.
- D. The optimizer does not generate new plans for the SQL statements for which the SQL plan baseline has been imported.

Answer: AC

147. View the Exhibit to examine the Automatic Database Diagnostic Monitor (ADDM) tasks.

You executed the following commands:

```
SQL> VAR tname VARCHAR2(60);  
SQL> BEGIN  
       :tname := 'my_instance_analysis_mode_task';  
       DBMS_ADDM.INSERT_SEGMENT_DIRECTIVE(:tname,'Sg_directive','SCOTT');  
END;
```

Which statement describes the consequence?

Advisor Tasks Change Default Parameters

Search

Select an advisory type and optionally enter a task name to filter the data that is displayed in your results set.

Advisory Type: Task Name: Advisor Runs: Status:

By default, the search returns all uppercase matches beginning with the string you entered. To run an exact or case-sensitive match, double quote the search string. You can use the wildcard symbol (%) in a double quoted string.

Results

Actions:

Select	Advisory Type	Name	Description	User	Status	Start Time	Duration (seconds)	Expires In (days)
<input type="radio"/>	ADDM	ADDM:1158544296_1_50	ADDM auto run: snapshots [49, 50], instance 1, database id 1158544296	SYS	COMPLETED	Aug 19, 2007 11:00:22 AM	1	30
<input checked="" type="radio"/>	ADDM	my_instance_analysis_mode_task		SYS	COMPLETED	Aug 19, 2007 10:01:23 AM	4	30
<input type="radio"/>	ADDM	ADDM:1158544296_1_47	ADDM auto run: snapshots [46, 47], instance 1, database id 1158544296	SYS	COMPLETED	Aug 19, 2007 6:01:06 AM	7	30
<input type="radio"/>	ADDM	ADDM:1158544296_1_46	ADDM auto run: snapshots [45, 46], instance 1	SYS	COMPLETED	Aug 19, 2007 5:00:56 AM	0	30

- A. The ADDM task is filtered to suppress the Segment Advisor suggestions for the SCOTT schema.
- B. The ADDM task is filtered to produce the Segment Advisor suggestions for the SCOTT schema only.
- C. The PL/SQL block produces an error because the my_instance_analysis_mode_task task has not been reset to its initial state.
- D. All subsequent ADDM tasks including my_instance_analysis_mode_task are filtered to suppress the Segment Advisor suggestions for the SCOTT schema.

Answer: C

148. Identify the three predefined server-generated alerts. (Choose three.)

- A. Drop User
- B. Tablespace Space Usage
- C. Resumable Session Suspended
- D. Recovery Area Low On Free Space

E. SYSTEM Tablespace Size Increment

Answer: BCD

149. In your database, the `RESULT_CACHE_MODE` parameter has been set to `MANUAL` in the initialization parameter file.

You issued the following command:

```
SQL>SELECT /*+ RESULT_CACHE */ sale_category, sum(sale_amt)
      FROM sales
      GROUP BY sale_category;
```

Where would the result of this query be stored?

- A. PGA
- B. large pool
- C. shared pool
- D. database buffer cache

Answer: C

150. You want the Automatic SQL Tuning process to stop accepting and implementing the recommended SQL profiles automatically. Which action would you perform to achieve this?

- A. Edit the automatic maintenance window group configuration.
- B. Set the `CURSOR_SHARING` parameter to `EXACT` for the database instance.
- C. Use the `DBMS_SQLTUNE.SET_TUNING_TASK_PARAMETERS` procedure to set `ACCEPT_SQL_PROFILES` to `FALSE`.
- D. Set the `SQLTUNE_CATEGORY` parameter to `DEFAULT` for the database instance.

Answer: C

151. View the Exhibit to examine the metrics with a threshold.

Which statement is true regarding the Number of Transactions (per second) metric?

Display

Metrics with Thresholds

Go

Alerts Configured with AWR Baseline Metric Thresholds

Edit Thresholds

Select	Metric Name	Alert Counts		AWR Baseline	Threshold Type	Adaptive?
		Critical	Warning			
	Workload Volume Metrics	0	3			
	Cumulative Logons (per second)	0	0		Fixed Values	
	Current Open Cursors Count	0	0		Fixed Values	
	Number of Transactions (per second)	0	3	SYSTEM_MOVING_WINDOW	Significance Level	

- A. Oracle uses statistical relevance to determine when an adaptive threshold has been breached for the metric.
- B. The statistics for the metric values observed over the baseline time period are not examined to determine threshold values.
- C. Oracle determines when an adaptive threshold has been breached based on the maximum value captured by the baseline.
- D. The total concurrent number of threshold violations, which must occur before an alert is raised for the metric, has been set to zero.

Answer: A

152. Sales details are being stored on a daily basis in the SALES_2007 table. A large amount of data is added to the table daily. To save disk space, you issued the following command:

```
ALTER TABLE sales_2007 COMPRESS FOR ALL OPERATIONS;
```

What would be the outcome of this command?

- A. It produces an error because data already exists in the table.
- B. It produces an error because compression can be enabled at table creation only.
- C. It compresses all data added or modified henceforth but the existing data in the table is not compressed immediately.
- D. It immediately compresses all existing data as well as new data, resulting from either fresh additions or modifications to existing data.

Answer: C

153. View the Exhibit to examine the error while executing the REPAIR FAILURE command in an RMAN session.

What is the reason for this error?

```

RMAN> REPAIR FAILURE;

Strategy: The repair includes complete media recovery with no data loss
Repair script: /u01/app/oracle/diag/rdbms/orcl/orcl/hm/reco_1074669596.hm

contents of repair script:
  # restore and recover datafile
  restore datafile 4, 5;
  recover datafile 4, 5;

Do you really want to execute the above repair (enter YES or NO)? y
executing repair script

Starting restore at 17-AUG-07
using channel ORA_DISK_1

skipping datafile 4; already restored to file /u01/app/oracle/oradata/orcl/users
01.dbf
channel ORA_DISK_1: starting datafile backup set restore
channel ORA_DISK_1: specifying datafile(s) to restore from backup set
channel ORA_DISK_1: restoring datafile 00005 to /u01/app/oracle/oradata/orcl/exa
mple01.dbf
channel ORA_DISK_1: reading from backup piece /u01/app/oracle/flash_recovery_are
a/ORCL/backupset/2007_08_16/o1_mf_nnndf_TAG20070816T130434_3d7t7nby_.bkp
RMAN-00571: =====
RMAN-00569: ===== ERROR MESSAGE STACK FOLLOWS =====
RMAN-00571: =====

RMAN-03015: error occurred in stored script Repair Script
ORA-19870: error while restoring backup piece /u01/app/oracle/flash_recovery_are
a/ORCL/backupset/2007_08_16/o1_mf_nnndf_TAG20070816T130434_3d7t7nby_.bkp
ORA-19573: cannot obtain exclusive enqueue for datafile 5

```

- A. Another repair session is running concurrently.
- B. The failure ID has not been mentioned in the command for data file 5.
- C. There are new failures recorded in the Automatic Diagnostic Repository (ADR).
- D. The ADVISE FAILURE command has not been issued before the REPAIR FAILURE command.

Answer: A

154. The application tables owned by the user TEST in a test database need to be exported to the APPS schema in the production database by using Data Pump. Which option of Data Pump Import would you use to accomplish this?

- A. owner
- B. touser
- C. attach
- D. remap_schema

Answer: D

155. The Oracle Database 11g database is running in the ARCHIVELOG mode. The archived redo log files are stored on three locations. The Flash Recovery Area is one of the locations. The details are given below:

LOG_ARCHIVE_DEST_1 = 'LOCATION = /disk1/archive'

LOG_ARCHIVE_DEST_2 = 'SERVICE = stdb1'

DB_RECOVERY_FILE_DEST = '/u01/oradata'

Examine the following RMAN command issued to set the deletion policy for archived log files:

```
RMAN> CONFIGURE ARCHIVELOG DELETION POLICY  
      TO BACKED UP 2 TIMES TO sbt;
```

Which statement is true regarding what this command accomplishes?

- A. All archived redo log files backed up at least twice to tape are deleted.
- B. All archived redo log files backed up at least once to tape are eligible for deletion.
- C. All archived redo log files backed up at least twice to tape are deleted from the flash recovery area.
- D. All archived redo log files in local archiving destinations and the flash recovery area backed up at least twice to tape are eligible for deletion.

Answer: D

156. You plan to have a larger moving window size for the default system-defined moving window baseline because you want to use the adaptive threshold. Which statement factors in this consideration while increasing the size of the moving window?

- A. The collection level for the AWR should be set to BASIC.
- B. The moving window size must be less than Undo Retention.
- C. The moving window size should be greater than the Automatic Workload Repository (AWR) retention period.
- D. The moving window size should be equal to or less than the Automatic Workload Repository (AWR) retention period.

Answer: D

157. You issued the following command on the temporary tablespace LMTEMP in your database:

```
SQL>ALTER TABLESPACE ltemp SHRINK SPACE KEEP 20M;
```

Which requirement must be fulfilled for this command to succeed?

- A. The tablespace must be locally managed.
- B. The tablespace must have only one temp file.
- C. The tablespace must be made nondefault and offline.
- D. The tablespace can remain as the default but must have no active sort operations.

Answer: A

158. USER_DATA is a nonencrypted tablespace that contains a set of tables with data. You want to convert all existing data in the USER_DATA tablespace and the new data into the encrypted format.

Which methods would you use to achieve this? (Choose all that apply.)

- A. Use Data Pump to transfer the existing data to a new encrypted tablespace.
- B. Use ALTER TABLE..MOVE to transfer the existing data to a new encrypted tablespace.
- C. Use CREATE TABLE AS SELECT to transfer the existing data to a new encrypted tablespace.
- D. Enable row movement for each table to be encrypted and then use ALTER TABLESPACE to encrypt the tablespace.
- E. Encrypt the USER_DATA tablespace using the ALTER TABLESPACE statement so that all the data in the tablespace is automatically encrypted.

Answer: ABC

159. View the Exhibit to examine the parameters set for your database instance.

You execute the following command to perform I/O calibration after the declaration of bind variables in the session that are used in the command:

```
SQL> EXECUTE dbms_resource_manager.calibrate_io( num_physical_disks=>1, -
max_latency=>50, -
max_iops=>:max_iops, -
max_mbps=>:max_mbps, -
actual_latency=>:actual_latency);
```

Which statement describes the consequence?

NAME	TYPE	VALUE
filesystemio_options	string	ASYNCH
backup_tape_io_slaves	boolean	FALSE
dbwr_io_slaves	integer	0
disk_asynch_io	boolean	TRUE
tape_asynch_io	boolean	TRUE
optimizer_use_pending_statistics	boolean	FALSE
statistics_level	string	TYPICAL
timed_os_statistics	integer	0
timed_statistics	boolean	FALSE
aq_tm_processes	integer	0
db_writer_processes	integer	1
gcs_server_processes	integer	0
global_txn_processes	integer	1
job_queue_processes	integer	1000
log_archive_max_processes	integer	4
processes	integer	150

- A. The command produces an error.
- B. The calibration process runs successfully and populates all the bind variables.
- C. The calibration process runs successfully but the latency time is not computed.
- D. The calibration process runs successfully but only the latency time is computed.

Answer: A

160. View the Exhibit for some of the parameter settings.

You start a session and issue the following command:

```
SQL>CREATE INDEX emp_ename ON emp(ename)
      TABLESPACE users INVISIBLE;
```

What is the outcome of the above command?

NAME	TYPE	VALUE
optimizer_dynamic_sampling	integer	2
optimizer_features_enable	string	11.1.0.6
optimizer_use_invisible_indexes	boolean	FALSE
optimizer_index_caching	integer	0
optimizer_index_cost_adj	integer	100
skip_unusable_indexes	boolean	TRUE

- A. The index is not used by the optimizer but is maintained during DML operations.
- B. The index is not used by the optimizer and is not maintained during DML operations.
- C. The index is used by the optimizer only if a hint is specified in the query statement and is maintained during DML operations.
- D. The index is used by the optimizer only if a hint is specified in the query statement but is not maintained during DML operations.

Answer: A

161. You need to configure fine-grained access control to external network resources from within your database. You create an access control list (ACL) using the DBMS_NETWORK_ACL_ADMIN package.

Which statement is true regarding the ACL created?

- A. It is a list of remote database links stored in the XML file that are available to the users of the database.
- B. It is a list of users and network privileges stored in the XML file according to which a group of users can connect to one or more hosts.
- C. It is a list of users and network privileges stored in the data dictionary according to which a group of

users can connect to one or more hosts.

D. It is the list of the host names or the IP addresses stored in the data dictionary that can connect to your database through PL/SQL network utility packages such as UTL_TCP.

Answer: B

162. Which statements are true regarding the creation of an incident package file by using the EM Workbench Support? (Choose all that apply.)

A. You can add SQL test cases to the incident package.

B. You can add or remove the trace files to the package.

C. You cannot create an incremental incident package when the physical files are purged from the ADR.

D. You can create the incremental incident package ZIP file for new or modified diagnostic information for the incident package already created.

Answer: ABD

163. You are managing an Oracle Database 11g ASM instance having three disks in a disk group with ASM compatibility attribute set to 11.1.0 and redundancy set to high. One of the disks in the disk group becomes unavailable because of power failure. Which statements will be true in this scenario? (Choose all that apply.)

A. The disk automatically goes offline.

B. The disk is immediately dropped from the disk group.

C. The ASM tracks the extents that are modified during the outage.

D. The ASM migrates the extents from the unavailable disk to the remaining disks.

Answer: AC

164. Identify three key features of ASM. (Choose three.)

A. file striping

B. allocation unit mirroring

C. automatic disk rebalancing

D. automatic file size increment

E. automatic undo management

Answer: ABC

165. Your company wants to upgrade the current production database to the RAC environment. To perform testing before migrating to the RAC environment, you performed the workload capture on the production database to record the peak workload. You set up the test RAC database and want to replay the recorded workload on the test machine. Note the following steps that you may require to replay the database workload:

- 1) Preprocess the captured workload.
- 2) Restart the database in RESTRICTED mode.
- 3) Set up the Replay Clients.
- 4) Restore the test database to the point when the capture started.
- 5) Remap connections.

Arrange the steps required in the correct sequence to accomplish this task on the test machine.

- A. 2, 1, 5, 3, 4
- B. 1, 2, 4, 5, 3
- C. 1, 4, 5, 3 (2 is not required.)
- D. 1, 2, 4, 5 (3 is not required.)
- E. 1, 4, 3, 5 (2 is not required.)

Answer: C

166. You performed the RMAN database backup with the KEEP option. Which two statements are true regarding this backup? (Choose two.)

- A. The KEEP option overrides the configured retention policy.
- B. The KEEP option is an attribute of an individual backup piece.
- C. The backup contains only data files and archived redo log files.
- D. The backup contains data files, the server parameter file, and the control file even if the control file autobackup is disabled.

Answer: AD

167. ENCRYPT_TS is an encrypted tablespace that contains tables with data.

Which statement is true regarding the effect of queries and data manipulation language (DML) statements on the encrypted data in the tables?

- A. The data is decrypted during SORT and JOIN operations.
- B. The data remains encrypted when it is read into memory.
- C. The data remains encrypted when it is stored in the redo logs.
- D. The data remains encrypted in the UNDO tablespace provided that the UNDO tablespace was created with the encryption option enabled.

Answer: C

168. You performed an incomplete recovery and opened the database with the RESETLOGS option. The LOG_ARCHIVE_FORMAT parameter is set to 'ora_%t_%s_%r.log'. Which statement regarding the archived redo log files, created in an earlier incarnation of the database, is true?

- A. The archived redo log files will be overwritten.
- B. The archived redo log files are deleted automatically.
- C. The archived redo log files should be moved to some other location.
- D. The archived redo log files are still maintained because the file names are unique.

Answer: D

169. Observe the following PL/SQL block:

```
BEGIN
dbms_spm.configure('SPACE_BUDGET_PERCENT', 30);
END;
```

Which statement is correct regarding the above PL/SQL block?

- A. It reserves 30% of the space in the SYSTEM tablespace for SMB.
- B. It reserves 30% of the space in the SYSAUX tablespace for SQL Management Base (SMB).

C. It generates a weekly warning in the alert log file when SMB occupies more than 30% of the SYSAUX tablespace.

D. It automatically purges the SQL management objects when SMB occupies more than 30% of the SYSAUX tablespace.

Answer: C

170. Evaluate the following command:

```
SQL> CREATE TABLE design_data (id NUMBER,  
                                doc CLOB)  
      LOB(doc) STORE AS SECUREFILE(DEDUPLICATE);
```

Which statement is true regarding the above command?

A. The LOB values are automatically compressed.

B. The LOB values are cached by default in the buffer cache.

C. The LOB values are automatically stored in encrypted mode.

D. All LOB data that is identical in two or more rows in a LOB column share the same data blocks.

Answer: D

171. You have three production databases, HRDB, FINDB, and ORGDB, that use the same ASM instance.

At the end of the day, while all three production database instances are running, you execute the following command on the ASM instance :

```
SQL> shutdown immediate;
```

What is the result of executing this command?

A. The ASM instance is shut down, but the other instances are still running.

B. It results in an error because other database instances are connected to it.

C. All the instances, including the ASM instance, are shut down in the IMMEDIATE mode.

D. HRDB, FINDB, and ORGDB instances are shut down in the ABORT mode and the ASM instance is

shut down in the IMMEDIATE mode.

Answer: B

172. Which three statements are true regarding the functioning of the Autotask Background Process (ABP)? (Choose three.)

- A. It translates tasks into jobs for execution by the scheduler.
- B. It creates jobs without considering the priorities associated with them.
- C. It determines the list of jobs that must be created for each maintenance window.
- D. It is spawned by the MMON background process at the start of the maintenance window.
- E. It maintains a repository in the SYSTEM tablespace to store the history of the execution of all tasks.

Answer: ACD

173. Examine the following values of the initialization parameters in the database having the SID ORCL:

BACKGROUND_DUMP_DEST=/u01/app/oracle/product/11.1.0/db_1/bdump

USER_DUMP_DEST=/u01/app/oracle/product/11.1.0/db_1/udump

CORE_DUMP_DEST=/u01/app/oracle/product/11.1.0/db_1/cdump

DIAGNOSTIC_DEST=

The environment variables have the following value:

ORACLE_BASE=/u01/app/oracle

ORACLE_HOME=/u01/app/oracle/product/11.1.0/db_1

What is the location of the Automatic Diagnostic Repository (ADR) home?

- A. /u01/app/oracle
- B. \$ORACLE_HOME/log
- C. \$ORACLE_HOME/bdump
- D. /u01/app/oracle/product/11.1.0/db_1

Answer: A

174. Which two statements are true regarding the functionality of the remap command in ASMCMD?

(Choose two.)

- A. It repairs blocks that have read disk I/O errors.
- B. It checks whether the alias metadata directory and the file directory are linked correctly.
- C. It repairs blocks by always reading them from the mirror copy and writing them to the original location.
- D. It reads the blocks from a good copy of an ASM mirror and rewrites them to an alternate location on disk if the blocks on the original location cannot be read properly.

Answer: AD

175. You need to perform an online table redefinition of an existing SALES table to partition it into two tablespaces TBS1 and TBS2.

The SALES table has a materialized view, materialized log, indexes, referential integrity constraint, and triggers with the PRECEDES clause existing on it.

What action is required for dependent objects when you perform online table redefinition?

- A. The materialized log should be dropped before the online table redefinition process.
- B. Triggers with the PRECEDES clause should be disabled before the online table redefinition process.
- C. Referential integrity constraints must be manually enabled after the online table redefinition process.
- D. The dependent materialized view should have a complete refresh performed after the online table redefinition process.

Answer: D

176. View the Exhibit to examine the error obtained during the I/O calibration process.

There are no data files on raw devices. What is the reason for this error?

```

SQL> EXECUTE dbms_resource_manager.calibrate_io( -
num_physical_disks=>1, -
max_latency=>50, -
max_iops=>:max_iops, -
max_mbps=>:max_mbps, -
actual_latency=>:actual_latency);
BEGIN dbms_resource_manager.calibrate_io( num_physical_disks=>1, max_latency=>50, max_iops=>:max_iops,
max_mbps=>:max_mbps, actual_latency=>:actual_latency); END;

*
ERROR at line 1:
ORA-56708: Could not find any datafiles with asynchronous i/o capability
ORA-06512: at "SYS.DBMS_RMIN", line 453
ORA-06512: at "SYS.DBMS_RESOURCE_MANAGER", line 1153
ORA-06512: at line 1

```

- A. The DISK_ASYNCH_IO parameter is set to TRUE.
- B. The FILESYSTEMIO_OPTIONS parameter is set to NONE.
- C. Another session runs the I/O calibration process concurrently.
- D. The pending area has not been created before running the I/O calibration process.

Answer: B

177. Examine the following PL/SQL block:

```

SET SERVEROUTPUT ON
SET LONG 10000
DECLARE report clob;
BEGIN
report := DBMS_SPM.EVOLVE_SQL_PLAN_BASELINE();
DBMS_OUTPUT.PUT_LINE(report);
END;

```

Which statement describes the effect of the execution of the above PL/SQL block?

- A. The plan baselines are verified with the SQL profiles.
- B. All fixed plan baselines are converted into nonfixed plan baselines.
- C. All the nonaccepted SQL profiles are accepted into the plan baseline.
- D. The nonaccepted plans in the SQL Management Base are verified with the existing plan baselines.

Answer: D

178. You have three temporary tablespace groups named G1, G2, and G3 in your database.

You are creating a new temporary tablespace as follows:

```
CREATE TEMPORARY TABLESPACE TEMP1 TEMPFILE '/u1/data/temp1.dbf' SIZE 10M TABLESPACE  
GROUP '';
```

Which statement regarding the above command is correct?

- A. It will create the tablespace TEMP1 in group G1.
- B. It will create the tablespace TEMP1 in group G3.
- C. It will not add the tablespace TEMP1 to any group.
- D. It will create the tablespace TEMP1 in the default group.

Answer: C

179. You want to track and store all transactional changes to a table over its lifetime. To accomplish this task, you enabled Flashback Data Archive with the retention of 5 years. After some time, the business requirement changed and you were asked to change the retention from 5 years to 3 years. To accomplish this, you issued the following command:

```
ALTER FLASHBACK ARCHIVE fla1 MODIFY RETENTION 3 YEAR;
```

What is the implication of this command?

- A. The command produces an error because the retention time cannot be reduced.
- B. All historical data older than three years is purged from the flashback archive FLA1.
- C. All historical data is purged and the new flashback data archives are maintained for three years.
- D. All historical data is retained but the subsequent flashback data archives are maintained for only three years.

Answer: B

180. Which two statements are true regarding hot patching? (Choose two.)

- A. It requires relinking of the Oracle binary.
- B. It does not require database instance shutdown.

- C. It can detect conflicts between two online patches.
- D. It is available for installing all patches on all platforms.
- E. It works only in a single database instance environment.

Answer: BC

181. In your database, the LDAP_DIRECTORY_SYSAUTH initialization parameter has been set to YES and the users who need to access the database as DBAs have been granted SYSDBA enterprise role in Oracle Internet Directory (OID). SSL and the password file have been configured.

A user SCOTT with the SYSDBA privilege tries to connect to the database instance from a remote machine using the command:

```
$ SQLPLUS scott/tiger@DB01 AS SYSDBA
```

where DB01 is the net service name.

Which authentication method would be used first?

- A. authentication by password file
- B. authentication by using certificates over SSL
- C. authentication by using the Oracle Internet Directory
- D. authentication by using the local OS of the database server

Answer: A

182. Which three actions are required to configure the Flashback Database? (Choose three.)

- A. set Flash Recovery Area
- B. enable Flashback logging
- C. create FLASHBACK tablespace
- D. start the database in the ARCHIVELOG mode
- E. start the database in the NOARCHIVELOG mode

Answer: ABD

183. Which two changes and their effect on the system can be tested by using the Database Replay feature? (Choose two)

- A. multiplexing of the control file
- B. database and operating system upgrades
- C. adding the redo log member to the database
- D. changing the database storage to ASM-managed storage

Answer: BD

184. Identify two situations in which you can use Data Recovery Advisor for recovery. (Choose two.)

- A. The database files are corrupted when the database is open.
- B. The archived log files are missing for which backup is not available.
- C. The user has dropped an important table that needs to be recovered.
- D. You are not able to start up the database instance because the required database files are missing.

Answer: AD

185. Which two statements regarding a SQL profile are true? (Choose two.)

- A. It is built by Automatic Tuning Optimizer.
- B. It cannot be stored persistently in the data dictionary.
- C. It can be used by the query optimizer automatically.
- D. It can be created manually by using the CREATE PROFILE command.

Answer: AC

186. In which situations will the ASM metadata backup help you recover the ASM disk in a disk group? (Choose all that apply.)

- A. when one or more disks in an ASM disk group are lost
- B. when the data file on an ASM disk group gets corrupted
- C. when one of the disks in a disk group is accidentally unplugged
- D. when one or more file directory paths are accidentally deleted from an ASM disk group

Answer: AD

187. The OPTIMIZER_USE_PLAN_BASELINES parameter is set to TRUE. The optimizer generates a plan for a SQL statement but does not find a matching plan in the SQL plan baseline. Which two operations are performed by the optimizer in this scenario? (Choose two.)

- A. The optimizer adds the new plan to the plan history.
- B. The optimizer selects the new plan for the execution of the SQL statement.
- C. The optimizer adds the new plan to the SQL plan baseline as an accepted plan.
- D. The optimizer adds the new plan to the SQL plan baseline but not in the ENABLED state.
- E. The optimizer costs each of the accepted plans in the SQL plan baseline and picks the one with the lowest cost.

Answer: AE

188. What are the recommendations for Oracle Database 11g installation to make it Optimal Flexible Architecture (OFA)-compliant? (Choose all that apply.)

- A. ORACLE_BASE should be set explicitly.
- B. An Oracle base should have only one Oracle home created in it.
- C. Flash recovery area and data file location should be on separate disks.
- D. Flash recovery area and data file location should be created under Oracle base in a non-Automatic Storage Management (ASM) setup.

Answer: ACD

189. Observe the following warning in an RMAN session of your database instance:

WARNING: new failures were found since last LIST FAILURE command

Which statement describes the scenario that must have produced this warning?

- A. The CHANGE FAILURE command has detected new failures recorded in the Automatic Diagnostic Repository (ADR).
- B. The VALIDATE DATABASE command has detected new failures recorded in the Automatic Diagnostic Repository (ADR).

C. The ADVISE FAILURE command has detected new failures recorded in the Automatic Diagnostic Repository (ADR) since the last LIST FAILURE.

D. The RECOVER command has detected new failures recorded in the Automatic Diagnostic Repository (ADR) since the last LIST FAILURE command was executed.

Answer: C

190. Which statements are true regarding system-partitioned tables? (Choose all that apply.)

A. Only a single partitioning key column can be specified.

B. All DML statements must use partition-extended syntax.

C. The same physical attributes must be specified for each partition.

D. Unique local indexes cannot be created on a system-partitioned table.

E. Traditional partition pruning and partitionwise joins are not supported on these tables.

Answer: DE

191. Which statement describes the effect of table redefinition on the triggers attached to the table?

A. All triggers on the table remain valid.

B. All triggers on the table are invalidated and are automatically revalidated with the next DML execution on the table.

C. All triggers on the table are invalidated and must be manually recompiled before the next DML execution on the table.

D. Only triggers that are affected by the changes to the structure of the table are invalidated and automatically revalidated with the next DML execution on the table.

Answer: B

192. An online tablespace, TEST_TBS, is full and you realize that no server-managed tablespace threshold alerts were generated for the TEST_TBS tablespace. What could be the reason, if the TEST_TBS tablespace does not include autoextensible data files?

A. TEST_TBS is a small file tablespace.

B. TEST_TBS is a bigfile tablespace (BFT).

C. TEST_TBS is the default temporary tablespace.

D. TEST_TBS is a dictionary-managed tablespace.

Answer: D

193. You are managing the APPPROD database as a DBA. You plan to duplicate this database in the same system with the name DUPDB.

You issued the following RMAN commands to create a duplicate database:

```
RMAN> CONNECT target sys/sys@APPPROD
```

```
RMAN> DUPLICATE TARGET DATABASE
```

```
    TO dupdb
```

```
    FROM ACTIVE
```

```
    DATABASE DB_FILE_NAME_CONVERT '/oracle/oradata/prod/',
```

```
    '/scratch/oracle/oradata/dupdb/'
```

```
    SPILE
```

```
    PARAMETER_VALUE_CONVERT '/oracle/oradata/prod/',
```

```
    '/scratch/oracle/oradata/dupdb/'
```

```
    SET SGA_MAX_SIZE = '300M'
```

```
    SET SGA_TARGET = '250M'
```

```
    SET LOG_FILE_NAME_CONVERT '/oracle/oradata/prod/redo',
```

```
    '/scratch/oracle/oradata/dupdb/redo/';
```

Which three are the prerequisites for the successful execution of the above command? (Choose three.)

- A. The source database should be open.
- B. The target database should be in ARCHIVELOG mode if it is open.
- C. RMAN should be connected to both the instances as SYSDBA.

- D. The target database backups should be copied to the source database backup directories.
- E. The password file must exist for the source database and have the same SYS user password as the target.

Answer: BCE

194. Which is the source used by Automatic SQL Tuning that runs as part of the AUTOTASK framework?

- A. SQL statements that are part of the AWR baseline only
- B. SQL statements based on the AWR top SQL identification
- C. SQL statements that are part of the available SQL Tuning Set (STS) only
- D. SQL statements that are available in the cursor cache and executed by a user other than SYS

Answer: B

195. The following databases are registered in the base recovery catalog: PROD1, PROD2, and PROD3. The database user CATOWNER owns the base recovery catalog. You want a new user VPC1 to have access to only the PROD1 database and create a virtual private catalog.

Given below are some of the commands required to achieve this:

- 1.SQL> GRANT recovery_catalog_owner TO vpc1;
- 2.RMAN> CONNECT CATALOG vpc1/password@catdb;
- 3.RMAN> GRANT CATALOG FOR DATABASE prod1 TO vpc1;
- 4.RMAN> CONNECT CATALOG catowner/password@catdb;
- 5.RMAN> CREATE VIRTUAL CATALOG;

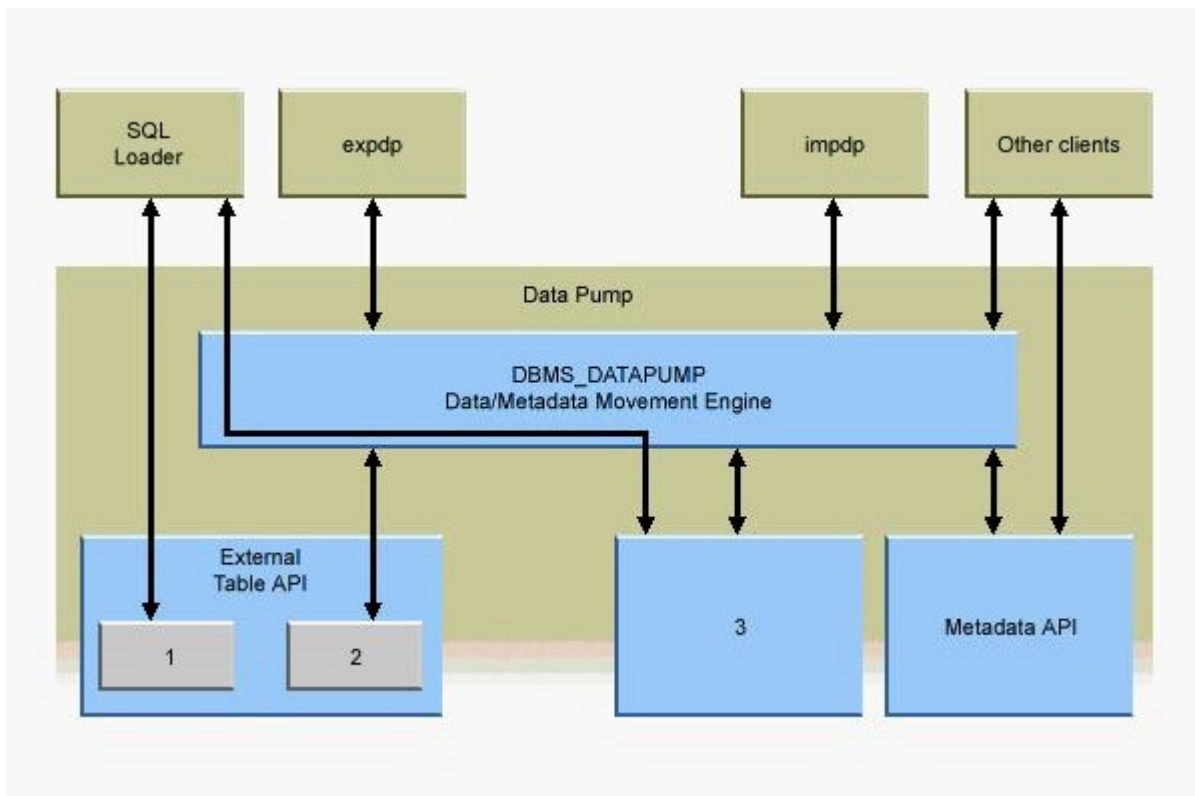

What is the correct sequence in which the commands have to be executed?

- A. 1, 4, 5, 2, 3
- B. 1, 4, 3, 2, 5
- C. 4, 5, 2, 3, 1
- D. 2, 3, 4, 5, 1
- E. 1, 4, 2, 3, 5

Answer: B

196. View the Exhibit and examine the Data Pump architecture.

Identify the numbered components.

- A. 1 - Oracle Loader, 2 - Oracle Data Pump, 3 - Direct Path API
- B. 1 - Oracle Data Pump, 2 - Direct Path API, 3 - Oracle Loader
- C. 1 - Direct Path API, 2 - Oracle Loader, 3 - Oracle Data Pump
- D. 1 - Oracle Loader, 2 - Direct Path API, 3 - Oracle Data Pump

Answer: A

197. You want to take the backup of the USERS tablespace. It has a single data file of 900 MB. You have tape drives of 300 MB each. The SBT channel is configured for the RMAN. To accomplish the backup, you issued the following RMAN command:

RMAN> BACKUP SECTION SIZE 300M TABLESPACE users;

Which two statements are true regarding the execution of the above command? (Choose two.)

- A. The backup piece size will be limited to 300 MB.
- B. The operation is accomplished using the default channel available.
- C. The RMAN parallelizes the backup although the parallelism is not set for a channel.
- D. Three channels for the tape drive must be configured by setting the parallelism to three.

Answer: AB

198. The SQL Tuning Advisor has been configured with default configurations in your database instance. Which recommendation is automatically implemented without the DBA's intervention after the SQL Tuning Advisor is run as part of the AUTOTASK framework?

- A. statistics recommendations
- B. SQL profile recommendations
- C. index-related recommendations
- D. restructuring of SQL recommendations

Answer: B

199. You are managing an Oracle Database 11g database. You want to take the backup of MULT_DATA, a big file tablespace of size 100 TB on tape drive, but you have tape drives of only 10 GB each. Which method would accomplish the task quickly and efficiently?

- A. intrafile parallel backup
- B. parallel image copy backup
- C. backup with MAXPIECESIZE configured for the channel
- D. parallel backup with MAXPIECESIZE configured for the channel

Answer: A

200. You performed an incomplete recovery and opened the database with the RESETLOGS option. The LOG_ARCHIVE_FORMAT parameter is set to 'ora_%t_%s_%r.log'. Which statement regarding the archived redo log files, created in an earlier incarnation of the database, is true?

- A. The archived redo log files will be overwritten.

- B. The archived redo log files are deleted automatically.
- C. The archived redo log files should be moved to some other location.
- D. The archived redo log files are still maintained because the file names are unique.

Answer: D

201. Which statements are true regarding the creation of an incident package file by using the EM Workbench Support? (Choose all that apply.)

- A. You can add SQL test cases to the incident package.
- B. You can add or remove the trace files to the package.
- C. You cannot create an incremental incident package when the physical files are purged from the ADR.
- D. You can create the incremental incident package ZIP file for new or modified diagnostic information for the incident package already created.

Answer: ABD

202. View the Exhibit to examine the details for an incident.

Which statement is true regarding the status of the incident?

Incident Details: 3937

Page Refreshed **August 21, 2007 7:46:17 PM GMT+07:00** [Refresh](#)

Summary

Problem Key	ORA-7445 [qcstda()+515] [SIGSEGV] [ADDR:0x0] [PC:0x9289729] [Address not mapped to object]	Data Dumped	Yes

- A. The DBA is working on the incident and prefers that the incident be kept in the ADR.
- B. The incident is now in the Done state and the ADR can select the incident to be purged.
- C. The incident has been newly created and is in the process of collecting diagnostic information.
- D. The data collection for the incident is complete and the incident can be packaged and sent to Oracle Support.

Answer: D

203. Which statement is true when Automatic Workload Repository (AWR) baselines are created using baseline templates?

- A. AWR baselines are always created as repeating baselines.
- B. AWR baselines can be created on the basis of two time values.
- C. AWR baselines are always created with infinite expiration duration.
- D. AWR baselines are always created using the Automatic Workload Repository (AWR) retention period as expiration duration.

Answer: B

204. Evaluate the following command and its output:

```
SQL>SELECT * FROM dba_temp_free_space;
```

TABLESPACE_NAME	TABLESPACE_SIZE	ALLOCATED_SPACE	FREE_SPACE
-----	-----	-----	-----
LMTEMP		250609664	101048576
		149561088	

Which two statements correctly interpret the output? (Choose two.)

- A. FREE_SPACE indicates only the space that is currently unallocated.
- B. ALLOCATED_SPACE indicates only the space currently allocated and in use.
- C. FREE_SPACE indicates only the space that is currently allocated and available for reuse.
- D. ALLOCATED_SPACE indicates both the space currently allocated and used, and the space that is available for reuse.
- E. FREE_SPACE indicates both the space that is currently allocated and available for reuse, and the space that is currently unallocated.

Answer: DE

205. You enabled Flashback Data Archive on the INVENTORY table. Which DDL operation is supported on the table after enabling Flashback Data Archive?

- A. Drop the table.
- B. Partition the table
- C. Truncate the table.
- D. Add a column to the table.
- E. Rename a column in the table.

Answer: D

206. Following is the list of locations in random order where orafnstab can be placed.

- 1./etc/mtab
- 2.\$ORACLE_HOME/dbs/orafnstab
- 3./etc/orafnstab

What is the sequence in which Direct NFS will search the locations?

- A. 1, 2, 3
- B. 3, 2, 1
- C. 2, 3, 1
- D. 1, 3, 2

Answer: C

207. View the Exhibit to examine the replay settings for replay parameters.

What is the implication for setting the values for replay parameters? (Choose all that apply.)

ORACLE Enterprise Manager 11g Database Control

Setup Preferences Help Logout

Database

Choose Initial Options Customize Options Prepare Replay Clients Wait for Client Connections Review

Set Up Workload Replay: Customize Options

Database orcl

Capture Name orcl

Cancel Back Step 2 of 5 Next

Connections Replay Parameters

Some replay parameters can be modified to change the behavior of the replay.

Name	Value
synchronization	TRUE
connect_time_scale	100
think_time_scale	100
think_time_auto_correct	TRUE

- A. The COMMIT order in the captured workload is preserved during replay.
- B. The value 100 in the THINK_TIME_SCALE parameter attempts to make the replay client shorten the think time between calls.
- C. The value 100 in the CONNECT_TIME_SCALE parameter attempts to connect all sessions as captured.
- D. The value 100 in the THINK_TIME_SCALE parameter attempts to match the captured user think time

while replaying.

E. The value 100 in the CONNECT_TIME_SCALE parameter attempts to connect all sessions immediately as soon as the replay begins.

Answer: ACD

208. You run the SQL Tuning Advisor (STA) to tune a SQL statement that is part of a fixed SQL plan baseline. The STA generates a SQL profile for the SQL statement, which recommends that you accept the profile. Which statement is true when you accept the suggested SQL profile?

- A. The tuned plan is not added to the SQL plan baseline.
- B. The tuned plan is added to the fixed SQL plan baseline as a fixed plan.
- C. The tuned plan is added to the fixed SQL plan baseline as a nonfixed plan.
- D. The tuned plan is added to a new nonfixed SQL plan baseline as a nonfixed plan.

Answer: C

209. View the following SQL statements:

Transaction T1

```
INSERT INTO hr.regions VALUES (5,'Pole');  
COMMIT;
```

Transaction T2

```
UPDATE hr.regions SET region_name='Poles' WHERE region_id = 5;  
COMMIT;
```

Transaction T3

```
UPDATE hr.regions SET region_name='North and South Poles' WHERE  
region_id = 5;
```

You want to back out transaction T2. Which option would you use?

- A. It is possible, but transaction T3 also backs out.
- B. It is possible with the NOCASCADE_FORCE option.
- C. It is possible with the NONCONFLICT_ONLY option.
- D. It is not possible because it has conflicts with transaction T3.

Answer: B

210. View the Exhibit for some of the parameter settings.

You start a session and issue the following command:

```
SQL>CREATE INDEX emp_ename ON emp(ename)
      TABLESPACE users INVISIBLE;
```

What is the outcome of the above command?

NAME	TYPE	VALUE
optimizer_dynamic_sampling	integer	2
optimizer_features_enable	string	11.1.0.6
optimizer_use_invisible_indexes	boolean	FALSE
optimizer_index_caching	integer	0
optimizer_index_cost_adj	integer	100
skip_unusable_indexes	boolean	TRUE

- A. The index is not used by the optimizer but is maintained during DML operations.
- B. The index is not used by the optimizer and is not maintained during DML operations.
- C. The index is used by the optimizer only if a hint is specified in the query statement and is maintained during DML operations.
- D. The index is used by the optimizer only if a hint is specified in the query statement but is not maintained during DML operations.

Answer: A

211. You want to track and store all transactional changes to a table over its lifetime. To accomplish this task, you enabled Flashback Data Archive with the retention of 5 years. After some time, the business requirement changed and you were asked to change the retention from 5 years to 3 years. To accomplish this, you issued the following command:

```
ALTER FLASHBACK ARCHIVE fla1 MODIFY RETENTION 3 YEAR;
```

What is the implication of this command?

- A. The command produces an error because the retention time cannot be reduced.
- B. All historical data older than three years is purged from the flashback archive FLA1.
- C. All historical data is purged and the new flashback data archives are maintained for three years.
- D. All historical data is retained but the subsequent flashback data archives are maintained for only three years.

Answer: B

212. Identify the three predefined server-generated alerts. (Choose three.)

- A. Drop User
- B. Tablespace Space Usage
- C. Resumable Session Suspended
- D. Recovery Area Low On Free Space
- E. SYSTEM Tablespace Size Increment

Answer: BCD

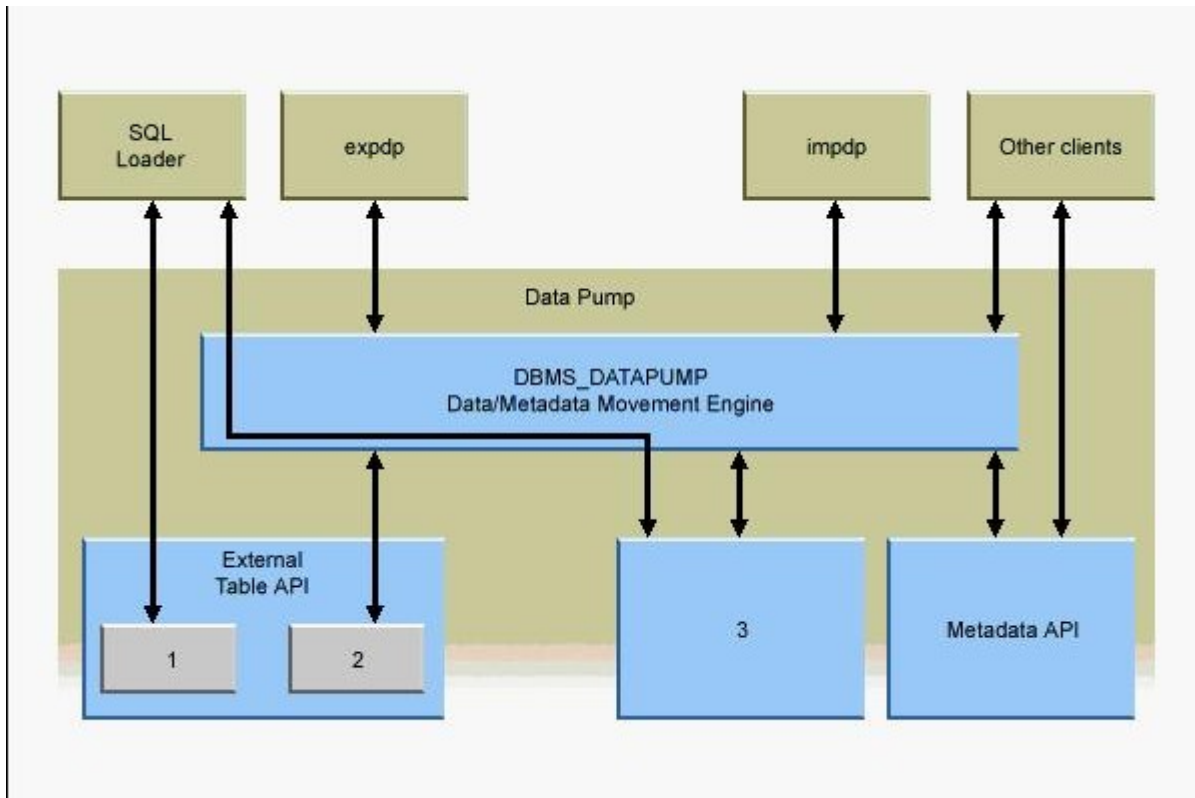

213. Which three actions are required to configure the Flashback Database? (Choose three.)

- A. set Flash Recovery Area
- B. enable Flashback logging
- C. create FLASHBACK tablespace
- D. start the database in the ARCHIVELOG mode
- E. start the database in the NOARCHIVELOG mode

Answer: ABD

214. View the Exhibit and examine the Data Pump architecture.

Identify the numbered components.

- A. 1 - Oracle Loader, 2 - Oracle Data Pump, 3 - Direct Path API
- B. 1 - Oracle Data Pump, 2 - Direct Path API, 3 - Oracle Loader
- C. 1 - Direct Path API, 2 - Oracle Loader, 3 - Oracle Data Pump
- D. 1 - Oracle Loader, 2 - Direct Path API, 3 - Oracle Data Pump

Answer: A

215. View the Exhibit to examine the error during the database startup.

You open an RMAN session for the database instance. To repair the failure, you executed the following as the first command in the RMAN session:

RMAN> REPAIR FAILURE;

Which statement describes the consequence of the command?

```
SQL> STARTUP
Total System Global Area  426864640 bytes
Fixed Size                 1300352 bytes
Variable Size             180357248 bytes
Database Buffers          239075328 bytes
Redo Buffers              6131712 bytes
Database mounted.
ORA-01157: cannot identify/lock data file 4 - see DBWR trace file
ORA-01110: data file 4: '/u01/app/oracle/oradata/orcl/users01.dbf'
```

- A. The command performs the recovery and closes the failures.
- B. The command only displays the advice and the RMAN script required for repair.
- C. The command produces an error because the ADVISE FAILURE command has not been executed before the REPAIR FAILURE command.
- D. The command executes the RMAN script to repair the failure and removes the entry from the Automatic Diagnostic Repository (ADR).

Answer: C

216. You want to perform the following operations for the DATA ASM disk group:

- Verify the consistency of the disk.
- Cross-check all the file extent maps and allocation tables for consistency.
- Check whether the alias metadata directory and file directory are linked correctly.
- Check that ASM metadata directories do not have unreachable allocated blocks.

Which command accomplishes these tasks?

- A. ALTER DISKGROUP data CHECK;
- B. ALTER DISKGROUP data CHECK DISK;
- C. ALTER DISKGROUP data CHECK FILE;
- D. ALTER DISKGROUP data CHECK DISK IN FAILURE GROUP 1;

Answer: A

217. Which client requests to the database can be captured as a part of the workload capture? (Choose

all that apply.)

- A. flashback query
- B. distributed transactions
- C. logging in and logging out of sessions
- D. all DDL statements having bind variables
- E. direct path load of data from external files

Answer: CD

218. Which two initialization parameters would you set to enable Automatic Shared Memory Management?

(Choose two.)

- A. set SHARED_POOL_SIZE to zero
- B. set STATISTICS_LEVEL to BASIC
- C. set SGA_TARGET to a non-zero value
- D. set DB_CACHE_SIZE to a non-zero value
- E. set STATISTICS_LEVEL to TYPICAL or ALL

Answer: CE

219. Evaluate the following command:

```
SQL> CREATE TABLE design_data (id NUMBER,  
                                doc CLOB)  
                                LOB(doc) STORE AS SECUREFILE(DEDUPLICATE);
```

Which statement is true regarding the above command?

- A. The LOB values are automatically compressed.
- B. The LOB values are cached by default in the buffer cache.
- C. The LOB values are automatically stored in encrypted mode.
- D. All LOB data that is identical in two or more rows in a LOB column share the same data blocks.

Answer: D

220. Which statement describes the information returned by the DBMS_SPACE.SPACE_USAGE procedure for LOB space usage?

- A. It returns space usage of only BasicFile LOB chunks.
- B. It returns space usage of only SecureFile LOB chunks.
- C. It returns both BasicFile and SecureFile LOB space usage for only nonpartitioned tables.
- D. It returns both BasicFile and SecureFile LOB space usage for both partitioned and nonpartitioned tables.

Answer: B

221. You have applications that have frequently executed queries, and produce small and static result sets. You configure the sqlnet.ora file in the client machine to set a nonzero value for the OCI_RESULT_CACHE_MAX_SIZE parameter. What is the purpose of this configuration?

- A. to avoid round trips to the server by enabling caching of query results in client memory
- B. to improve performance by storing a copy of the data from the private SQL area of the PGA
- C. to enhance the query performance by creating a cache in the client memory for sorting operations
- D. to avoid the storing of query plans and results in the server by creating a cache in the client memory

Answer: A

222. A PL/SQL procedure queries only those columns of a redefined table that were unchanged by the online table redefinition. What happens to the PL/SQL procedure after the online table redefinition?

- A. It remains valid.
- B. It becomes invalid for all options of online table redefinition but automatically gets revalidated the next time it is used.
- C. It becomes invalid for all options of online table redefinition and is automatically recompiled during online redefinition of the table.
- D. It becomes invalid only if the storage parameters have been modified and it automatically gets revalidated the next time it is used.

Answer: A

223. You need to create a partitioned table to store historical data and you issued the following command:

```
CREATE TABLE purchase_interval
PARTITION BY RANGE (time_id)
INTERVAL (NUMTOYMINTERVAL(1,'month')) STORE IN (tbs1,tbs2,tbs3)
(
PARTITION p1 VALUES LESS THAN(TO_DATE('1-1-2005', 'dd-mm-yyyy')),
PARTITION p2 VALUES LESS THAN(TO_DATE('1-1-2007', 'dd-mm-yyyy')))
AS
SELECT *
FROM purchases
WHERE time_id < TO_DATE('1-1-2007','dd-mm-yyyy');
```

What is the outcome of the above command?

- A. It returns an error because the range partitions P1 and P2 should be of the same range.
- B. It creates two range partitions (P1, P2). Within each range partition, it creates month wise subpartitions.
- C. It creates two range partitions of varying range. For data beyond '1-1-2007,' it creates partitions with a width of one month each.
- D. It returns an error because the number of tablespaces (TBS1,TBS2,TBS3)specified does not match the number of range partitions (P1,P2) specified.

Answer: C

224. You executed the following command to drop a user:

```
DROP USER scott CASCADE;
```

Which two statements regarding the above command are correct? (Choose two.)

- A. All the objects of scott are moved to the Recycle Bin.
- B. Any objects in the Recycle Bin belonging to scott are purged.
- C. All the objects owned by scott are permanently dropped from the database.

- D. All the objects of scott in the Recycle Bin must be purged before executing the DROP command.
- E. Any objects in the Recycle Bin belonging to scott will not be affected by the above DROP command.

Answer: BC

225. View the Exhibit exhibit1 to observe the maintenance window property.

View the Exhibit exhibit2 to examine the output of the query.

Which two statements describe the conclusions? (Choose two.)

ORACLE Enterprise Manager 11g Database Control

Setup Preferences Help Logout

Database

Database Instance: orcl > Scheduler Windows > Logged in As SYS

View Window: TUESDAY_WINDOW

Edit OK

Name **TUESDAY_WINDOW**

Resource Plan **DEFAULT_MAINTENANCE_PLAN**

Enabled **TRUE**

Priority **LOW**

Description **Tuesday window for maintenance tasks**

Schedule

Repeat **By Weeks**

Interval (Weeks) **1**

Days of Week **Tuesday**

Repeat Time **Hour:10 Minute:00 Second:00 PM**

Duration (min) **0 hour(s) 20 minute(s)**

Available to Start

Not Available After

Edit OK

```
SQL> SELECT client_name,
2      mean_job_duration,
3      resource_percentage
4      FROM DBA_AUTOTASK_CLIENT;
```

CLIENT_NAME	MEAN_JOB_DURATION	RESOURCE_PERCENTAGE
auto optimizer stats collection	+0000000000 00:18:41.000000000	25
auto space advisor	+0000000000 00:02:36.666666666	25
sql tuning advisor	+0000000000 00:04:36.500000000	25

- A. The window duration should be increased.
- B. RESOURCE_PERCENTAGE should be increased.

C. RESOURCE_PERCENTAGE should be decreased.

D. The repeat time for the window should be decreased.

Answer: AB

226. Examine the following PL/SQL block:

```
DECLARE
```

```
    my_plans pls_integer;
```

```
BEGIN
```

```
my_plans := DBMS_SPM.LOAD_PLANS_FROM_CURSOR_CACHE (sql_id => ?9twu5t2dn5xd?;
```

```
END;
```

Which statement is true about the plan being loaded into the SQL plan baseline by the above command?

A. It is loaded with the FIXED status.

B. It is loaded with the ACCEPTED status.

C. It is not loaded with the ENABLED status.

D. It is not loaded with the ACCEPTED status.

Answer: B

227. USER_DATA is a nonencrypted tablespace that contains a set of tables with data. You want to convert all existing data in the USER_DATA tablespace and the new data into the encrypted format.

Which methods would you use to achieve this? (Choose all that apply.)

A. Use Data Pump to transfer the existing data to a new encrypted tablespace.

B. Use ALTER TABLE..MOVE to transfer the existing data to a new encrypted tablespace.

C. Use CREATE TABLE AS SELECT to transfer the existing data to a new encrypted tablespace.

D. Enable row movement for each table to be encrypted and then use ALTER TABLESPACE to encrypt the tablespace.

E. Encrypt the USER_DATA tablespace using the ALTER TABLESPACE statement so that all the data in the tablespace is automatically encrypted.

Answer: ABC

228. Which are the prerequisites for performing flashback transactions on your database? (Choose all that apply.)

- A. Supplemental log must be enabled.
- B. Supplemental log must be enabled for the primary key.
- C. Undo retention guarantee for the database must be configured.
- D. Execute permission on the DBMS_FLASHBACK package must be granted to the user.

Answer: ABD

229. In which two aspects does hot patching differ from conventional patching? (Choose two.)

- A. It consumes more memory compared with conventional patching.
- B. It can be installed and uninstalled via OPatch unlike conventional patching.
- C. It takes more time to install or uninstall compared with conventional patching.
- D. It does not require down time to apply or remove unlike conventional patching.
- E. It is not persistent across instance startup and shutdown unlike conventional patching.

Answer: AD

230. Evaluate the following function code:

```
CREATE FUNCTION get_dept_avg(dept_id NUMBER)
RETURN NUMBER
RESULT_CACHE RELIES_ON (EMPLOYEES)
IS
avgsal NUMBER(6);
BEGIN
    SELECT AVG(SALARY) INTO avgsal
    FROM EMPLOYEES
    WHERE DEPARTMENT_ID = dept_id;
    RETURN avgsal;
END get_dept_avg;
```

Which statement is true regarding the above function?

- A. The cached result becomes invalid when any structural change is done to the EMPLOYEES table.
- B. If the function execution results in an unhandled exception, the exception result is also stored in the cache.
- C. Each time the function is invoked in a different session, the current result in the result cache gets overwritten.
- D. If the function is invoked with a different parameter value, the existing result in the result cache gets overwritten by the latest value.

Answer: A

231. You executed the following command:

```
RMAN> RECOVER COPY OF DATAFILE '/u01/app/oracle/oradata/orcl/users01.dbf';
```

Which statement regarding the above command is correct?

- A. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the image copy.
- B. The '/u01/app/oracle/oradata/orcl/users01.dbf' data file is recovered from the last incremental backup.
- C. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are updated with all changes up to incremental backup SCN.
- D. Image copies of the '/u01/app/oracle/oradata/orcl/users01.dbf' data file are recovered using the above command if data file recovery fails.

Answer: C

232. Which dependent object will get invalidated even if it is not affected by the table redefinition?

- A. views
- B. triggers
- C. packages
- D. synonyms

Answer: B

233. Which two statements about workload capture and replay operations are true? (Choose two.)

- A. The clients must be created manually on the test machines to perform more realistic testing.
- B. Restart the database in RESTRICTED mode before beginning workload replay to enable a clean state for workload replay.
- C. Restart the database in RESTRICTED mode before beginning workload capture to enable a clean state for capturing the workload.
- D. The application state of the capture system must be identical to the application state of the replay system when the workload replay begins.

Answer: CD

234. You executed the following commands:

```
SQL> ALTER SESSION SET OPTIMIZER_USE_PENDING_STATISTICS = false;  
SQL> EXECUTE DBMS_STATS.SET_TABLE_PREFS('SH', 'CUSTOMERS', 'PUBLISH',false);  
SQL> EXECUTE DBMS_STATS.GATHER_TABLE_STATS('SH', 'CUSTOMERS');
```

Which statement is correct regarding the above statistics collection on the SH.CUSTOMERS table in the above session?

- A. The statistics are stored in the pending statistics table in the data dictionary.
- B. The statistics are treated as the current statistics by the optimizer for all sessions.
- C. The statistics are treated as the current statistics by the optimizer for the current sessions only.
- D. The statistics are temporary and used by the optimizer for all sessions until this session terminates.

Answer: A

235. Which two statements are true regarding the starting of the database instance using the following command? (Choose two.) SQL>STARTUP UPGRADE

- A. It enables all system triggers.
- B. It allows only SYSDBA connections.
- C. It ensures that all job queues remain active during the upgrade process.

D. It sets system initialization parameters to specific values that are required to enable database upgrade scripts to be run.

Answer: BD

236. Evaluate the following block of code:

```
BEGIN
  DBMS_NETWORK_ACL_ADMIN.CREATE_ACL (
    acl          => 'mycompany-com-permissions.xml',
    principal    => 'ACCT_MGR',
    is_grant     => TRUE,
    privilege    => 'connect');
  DBMS_NETWORK_ACL_ADMIN.ASSIGN_ACL (
    acl          => 'mycompany-com-permissions.xml',
    host         => '*.mycompany.com');
END;
```

What is the outcome of the above code?

- A. It produces an error because a fully qualified host name needs to be specified.
- B. It produces an error because the range of ports associated with the hosts has not been specified.
- C. It creates an access control list (ACL) with the user ACCT_MGR who gets the CONNECT and RESOLVE privileges.
- D. It creates an access control list (ACL) with the user ACCT_MGR who gets the CONNECT privilege but not the RESOLVE privilege.

Answer: C

237. The Oracle Database 11g database is running in the ARCHIVELOG mode. The archived redo log files are stored on three locations. The Flash Recovery Area is one of the locations. The details are given below:

LOG_ARCHIVE_DEST_1 = 'LOCATION = /disk1/archive'

LOG_ARCHIVE_DEST_2 = 'SERVICE = stdb1'

DB_RECOVERY_FILE_DEST = '/u01/oradata'

Examine the following RMAN command issued to set the deletion policy for archived log files:

RMAN> CONFIGURE ARCHIVELOG DELETION POLICY

TO BACKED UP 2 TIMES TO sbt;

Which statement is true regarding what this command accomplishes?

- A. All archived redo log files backed up at least twice to tape are deleted.
- B. All archived redo log files backed up at least once to tape are eligible for deletion.
- C. All archived redo log files backed up at least twice to tape are deleted from the flash recovery area.
- D. All archived redo log files in local archiving destinations and the flash recovery area backed up at least twice to tape are eligible for deletion.

Answer: D

238. View the Exhibit exhibit1 to examine the series of SQL commands.

View the Exhibit exhibit2 to examine the plans available in the SQL plan baseline. The baseline in the first row of the Exhibit is created when OPTIMIZER_MODE was set to FIRST_ROWS.

Which statement is true if the SQL query in exhibit1 is executed again when the value of OPTIMIZER_MODE is set to FIRST_ROWS?

```
SQL> SELECT signature, sql_handle, plan_name, origin, enabled,
accepted, fixed, autopurge
FROM dba_sql_plan_baselines;
```

SIGNATURE	SQL_HANDLE	PLAN_NAME	ORIGIN	ENABLED	ACCEPTED	FIXED
8.062E+18	SYS_SQL_6fe2	SYS_SQL_PLAN_1ea	AUTO-CAPTURE	YES	NO	NO
8.062E+18	SYS_SQL_6fe2	SYS_SQL_PLAN_4be	AUTO-CAPTURE	YES	YES	NO
...						
...						
...						

```
SQL> SHOW PARAMETER OPTIMIZER
```

NAME	TYPE	VALUE
optimizer_capture_sql_plan_baselines	boolean	TRUE
optimizer_dynamic_sampling	integer	2
optimizer_features_enable	string	11.1.0.6
optimizer_index_caching	integer	0
optimizer_index_cost_adj	integer	100
optimizer_mode	string	ALL_ROWS
optimizer_secure_view_merging	boolean	TRUE
optimizer_use_invisible_indexes	boolean	FALSE
optimizer_use_pending_statistics	boolean	FALSE
optimizer_use_sql_plan_baselines	boolean	TRUE

```
SQL> SELECT * FROM sh.sales WHERE quantity_sold > 40 ORDER BY prod_id;
SQL> SELECT * FROM sh.sales WHERE quantity_sold > 40 ORDER BY prod_id;
SQL> ALTER SESSION SET OPTIMIZER_MODE=FIRST_ROWS;
SQL> SELECT * FROM sh.sales WHERE quantity_sold > 40 ORDER BY prod_id;
```

- A. The optimizer uses a new plan because none of the plans in the exhibit2 are fixed plans.
- B. The optimizer uses the plan in the second row of the exhibit2 because it is an accepted plan.
- C. The optimizer uses the plan in the first row of the exhibit2 because it is the latest generated plan.
- D. The optimizer uses the plan in the first row of the exhibit2 because OPTIMIZER_MODE was set to FIRST_ROW during its creation.

Answer: B

239. Which method would you use to undo the changes made by a particular transaction without affecting the changes made by other transactions?

- A. point-in-time recovery
- B. execute the ROLLBACK command with transaction number
- C. flashback the database to before the transaction was committed
- D. determine all the necessary undo SQL statements from FLASHBACK_TRANSACTION_QUERY and use them for recovery

Answer: D

240. Which two statements regarding the Flashback Table feature are correct? (Choose two.)

- A. Flashback Table can be performed on system tables.
- B. Flashback Table operation does not shrink the segments.
- C. Flashback Table uses log mining to extract SQL_REDO and SQL_UNDO statements.
- D. Flashback Table operation acquires exclusive data manipulation language (DML) locks.

Answer: BD

241. In your database, the LDAP_DIRECTORY_SYSAUTH initialization parameter has been set to YES and the users who need to access the database as DBAs have been granted SYSDBA enterprise role in Oracle Internet Directory (OID). SSL and the password file have been configured.

A user SCOTT with the SYSDBA privilege tries to connect to the database instance from a remote machine using the command:

```
$ SQLPLUS scott/tiger@DB01 AS SYSDBA
```

where DB01 is the net service name.

Which authentication method would be used first?

- A. authentication by password file
- B. authentication by using certificates over SSL
- C. authentication by using the Oracle Internet Directory
- D. authentication by using the local OS of the database server

Answer: A

242. Which is the source used by Automatic SQL Tuning that runs as part of the AUTOTASK framework?

- A. SQL statements that are part of the AWR baseline only
- B. SQL statements based on the AWR top SQL identification

- C. SQL statements that are part of the available SQL Tuning Set (STS) only
- D. SQL statements that are available in the cursor cache and executed by a user other than SYS

Answer: B

243. You set the following parameters in the parameter file and restarted the database:

```
MEMORY_MAX_TARGET=0
MEMORY_TARGET=500M
PGA_AGGREGATE_TARGET=90M
SGA_TARGET=270M
```

Which two statements are true regarding these parameters after the database instance is restarted?

(Choose two.)

- A. The MEMORY_MAX_TARGET parameter is automatically set to 500 MB.
- B. The value of the MEMORY_MAX_TARGET parameter remains zero till it is changed manually.
- C. The PGA_AGGREGATE_TARGET and SGA_TARGET parameters are automatically set to zero.
- D. The lower bounds of PGA_AGGREGATE_TARGET and SGA_TARGET parameters are set to 90 MB and 270 MB, respectively.

Answer: AD

244. Which statements are true regarding the system-defined moving window baseline in Oracle Database 11g? (Choose all that apply.)

- A. It does not allow you to change the moving window size.
- B. Adaptive threshold functionalities use it by default to compute statistics.
- C. It is created by default with the window size being equal to the AWR retention time.
- D. It is created when the first snapshot is collected by the Automatic Workload Repository (AWR).

Answer: BC

245. You want to convert your existing non-ASM files to ASM files for the database PROD. Which method or command would you use to accomplish this task?

- A. Data Pump Export and Import
- B. conventional export and import
- C. the CONVERT command of RMAN
- D. the BACKUP AS COPY.. command of RMAN

Answer: D

246. Which three statements are true regarding persistent lightweight jobs? (Choose three.)

- A. The user cannot set privileges on persistent lightweight jobs.
- B. The use of a template is mandatory to create persistent lightweight jobs.
- C. Persistent lightweight jobs modify several tables in the data dictionary to generate a lot of redo.
- D. Persistent lightweight jobs are useful when users need to create a large number of jobs in a short time.
- E. Persistent lightweight jobs are useful when users need to create a small number of jobs that run infrequently.

Answer: ABD

247. Immediately after adding a new disk to or removing an existing disk from an ASM instance, you find that the performance of the database goes down initially until the time the addition or removal process is completed, and then gradually becomes normal. Which two activities would you perform to maintain a consistent performance of the database while adding or removing disks? (Choose two.)

- A. Define the POWER option while adding or removing the disks.
- B. Increase the number of ARB processes by setting up a higher value for ASM_POWER_LIMIT.
- C. Increase the number of DBWR processes by setting up a higher value for DB_WRITER_PROCESSES.
- D. Increase the number of slave database writer processes by setting up a higher value for DBWR_IO_SLAVES.

Answer: AB

248. Which two statements are true regarding Health Monitor checks in Oracle Database 11g? (Choose two.)

- A. Health Monitor checks are always initiated manually when there is some critical error.

- B. Health Monitor checks can be used to scan the contents of the redo log and archive logs for accessibility and corruption.
- C. Health Monitor checks can be used to verify the contents of dictionary entries for each dictionary object and fix it automatically.
- D. Health Monitor checks can be used to verify the integrity of database files and report failures if these files are inaccessible, corrupt, or inconsistent.

Answer: BD

249. The application tables owned by the user TEST in a test database need to be exported to the APPS schema in the production database by using Data Pump. Which option of Data Pump Import would you use to accomplish this?

- A. owner
- B. touser
- C. attach
- D. remap_schema

Answer: D

250. You are managing the APPPROD database that is not using Oracle-managed files. You plan to duplicate this database in the same system with the name DUPDB. You want to create the same directory structure for duplicate database files as of the target database.

You executed the following RMAN commands:

```
RMAN> CONNECT TARGET sys/sys@APPPROD
```

```
RMAN> CONNECT AUXILIARY sys/sys@DUPDB
```

```
RMAN> DUPLICATE TARGET DATABASE
```

```
    TO dupdb
```

```
    FROM ACTIVE DATABASE
```

PASSWORD FILE

SPILE

NOFILENAMECHECK;

What are the implications of this command?

- A. It creates database files for the duplicate database under the Oracle base with a different directory for the duplicate database.
- B. It overwrites data files of the target database because a different location for data files is not mentioned for the duplicate database.
- C. It creates database files for the duplicate database under the same Oracle home as that of the target database with the same directory structure.
- D. It creates database files for the duplicate database under the same Oracle home as that of the target but with a different directory for the duplicate database.

Answer: B

251. You are using Recovery Manager (RMAN) to perform backups. In which three situations would you perform a compressed backup? (Choose three.)

- A. You are backing up to tape and your tape device performs its own compression.
- B. You are making image copies, and you have not enabled tablespace compression.
- C. You are using disk-based backups and disk space in your Flash Recovery Area, or other disk-based backup destinations are limited.
- D. You are performing your backups to some device over a network where reduced network bandwidth is more important than CPU usage.
- E. You are using some archival backup media, such as CD or DVD, where reducing backup sizes saves media costs and archival storage.

Answer: CDE

252. You are managing an Oracle Database 11g database with the ASM storage. The database is having big file tablespaces. You want files to open faster and less memory to be used in the shared pool to manage the extent maps. What configuration would you effect to achieve your objective? (Choose all that

apply.)

- A. Set the ASM compatibility attribute for the ASM disk group to 11.1.0.
- B. Set the RDBMS compatibility attribute for the ASM disk group to 11.1.0.
- C. Set the COMPATIBLE initialization parameter for the ASM instance to 11.1.0.
- D. Set the COMPATIBLE initialization parameter for the database instance to 11.1.0.

Answer: AD

253. View the Exhibit to examine a portion of the output from the VALIDATE DATABASE command.

Which statement is true about the block corruption detected by the command?

```

File Status Marked Corrupt Empty Blocks Blocks Examined High SCN
-----
5      OK      0          1711          12800          571420
  File Name: /u01/app/oracle/oradata/orcl/example01.dbf
  Block Type Blocks Failing Blocks Processed
  -----
    Data      0          4455
    Index     0          1271
    Other     0          5363

File Status Marked Corrupt Empty Blocks Blocks Examined High SCN
-----
6     FAILED  0          624           640          603220
  File Name: /u01/app/oracle/oradata/orcl/mytbs1.dbf
  Block Type Blocks Failing Blocks Processed
  -----
    Data      0           4
    Index     0           0
    Other     1          12

File Status Marked Corrupt Empty Blocks Blocks Examined High SCN
-----
7      OK      0          621           640          604259
  File Name: /u01/app/oracle/oradata/orcl/mytbs2.dbf
  Block Type Blocks Failing Blocks Processed
  -----
    Data      0           5
    Index     0           0
    Other     0          14

validate found one or more corrupt blocks
See trace file /u01/app/oracle/diag/rdbms/orcl/orcl/trace/orcl_ora_22981.trc for details
channel ORA_DISK_1: starting validation of datafile
channel ORA_DISK_1: specifying datafile(s) for validation
including current control file for validation
including current SPFILE in backup set
channel ORA_DISK_1: validation complete, elapsed time: 00:00:01

```

- A. No action is taken except the output in the Exhibit.
- B. The corruption is repaired by the command implicitly.
- C. The failure is logged into the Automatic Diagnostic Repository (ADR).

D. The ADVISE FAILURE command is automatically called to display the repair script.

Answer: C

254. You perform the following activities during the database upgrade from Oracle Database 10g to Oracle Database 11g:

1. Capture plans for a SQL workload into a SQL Tuning Set (STS) before upgrade.
2. Load these plans from the STS into the SQL plan baseline immediately after the upgrade.

What is the reason for performing these activities?

- A. to minimize plan regression due to the use of a new optimizer version
- B. to completely avoid the use of new plans generated by a new optimizer version
- C. to prevent plan capturing when the SQL statement is executed after the database upgrade
- D. to keep the plan in the plan history so that it can be used when the older version of the optimizer is used

Answer: A

255. Which statements are true regarding the concept of problems and incidents in the fault diagnosability infrastructure for Oracle Database 11g? (Choose all that apply.)

- A. The problem key is the same as the incident number.
- B. Every problem has a problem key, which is a text string that describes the problem.
- C. The database makes an entry into the alert log file when problems and incidents occur.
- D. The database sends an incident alert to the Oracle Enterprise Manager Database Home page.
- E. Only the incident metadata and dumps are stored in the Automatic Diagnostic Repository (ADR).

Answer: BCD

256. Which two kinds of failures make the Data Recovery Advisor (DRA) generate a manual checklist? (Choose two.)

- A. failures because a data file is renamed by error
- B. failures when no standby database is configured

- C. failures that require no archive logs to be applied for recovery
- D. failures due to loss of connectivity-for example, an unplugged disk cable

Answer: AD

257. Evaluate the following SQL statement used to create the PRODUCTS table:

```
CREATE TABLE products
(product_id NUMBER(3) PRIMARY KEY,
product_desc VARCHAR2(25),
qty NUMBER(8,2),
rate NUMBER(10,2),
total_value AS ( qty * rate))
PARTITION BY RANGE (total_value)
(PARTITION p1 VALUES LESS THAN (100000),
PARTITION p2 VALUES LESS THAN (150000),
PARTITION p3 VALUES LESS THAN (MAXVALUE))
COMPRESS FOR ALL OPERATIONS;
```

Which statement is true regarding this command?

- A. It executes successfully but partition pruning cannot happen for this partition key.
- B. It produces an error because the TOTAL_VALUE column cannot be used as a partition key.
- C. It produces an error because compression cannot be used for the TOTAL_VALUE partition key.
- D. It executes successfully but the values in the TOTAL_VALUE column would not be physically stored in the partitions.

Answer: D

258. View the Exhibit to examine the parameter values.

You are planning to set the value for the MEMORY_TARGET parameter of your database instance. What value would you assign?

```
SQL> SHOW PARAMETER TARGET
```

NAME	TYPE	VALUE
archive_lag_target	integer	0
db_flashback_retention_target	integer	1440
fast_start_io_target	integer	0
fast_start_mttr_target	integer	0
memory_max_target	big integer	0
memory_target	big integer	0
pga_aggregate_target	big integer	90M
sga_target	big integer	272M

- A. 90 MB
- B. 272 MB
- C. 362 MB
- D. 1440 MB

Answer: C

259. To generate recommendations to improve the performance of a set of SQL queries in an application, you execute the following blocks of code:

```
BEGIN
```

```
    dbms_advisor.create_task(dbms_advisor.sqlaccess_advisor,'TASK1');
```

```
END;
```

```
/
```

```
BEGIN
```

```
    dbms_advisor.set_task_parameter('TASK1','ANALYSIS_SCOPE','ALL');
```

```
    dbms_advisor.set_task_parameter('TASK1','MODE','COMPREHENSIVE');
```

```
END;
```

```
/
```

```
BEGIN
```

```
    dbms_advisor.execute_task('TASK1');
```

```
    dbms_output.put_line(dbms_advisor.get_task_script('TASK1'));
```

```
END;
```

/

The blocks of code execute successfully; however, you do not get the required outcome.

What could be the reason?

- A. A template needs to be associated with the task.
- B. A workload needs to be associated with the task.
- C. The partial or complete workload scope needs to be associated with the task.
- D. The type of structures (indexes, materialized views, or partitions) to be recommended need to be specified for the task.

Answer: B

260. You have 100 segments in the USERS tablespace. You realize that the USERS tablespace is running low on space. You can use Segment Advisor to _____.

- A. identify the segments that you should shrink
- B. modify the storage parameters for the tablespace
- C. automatically shrink the segments with unused space
- D. check the alerts generated for the tablespace that is running low on space

Answer: A

261. You installed Oracle Database 11g afresh. Which statements are true regarding the default audit settings in this database? (Choose all that apply.)

- A. Auditing is enabled for all privileges.
- B. Auditing is disabled for all privileges.
- C. The audit trail is stored in the database.
- D. The audit trail is stored in an operating system file.
- E. Auditing is enabled for certain privileges related to database security.

Answer: CE

262. Which two are the uses of the ASM metadata backup and restore (AMBR) feature? (Choose two.)

- A. It can be used to back up all data on ASM disks.
- B. It can be used to re-create the ASM disk group with its attributes.
- C. It can be used to recover the damaged ASM disk group along with the data.
- D. It can be used to gather information about a preexisting ASM disk group with disk paths, disk name, failure groups, attributes, templates, and alias directory structure.

Answer: BD

263. An online tablespace, TEST_TBS, is full and you realize that no server-managed tablespace threshold alerts were generated for the TEST_TBS tablespace. What could be the reason, if the TEST_TBS tablespace does not include autoextensible data files?

- A. TEST_TBS is a small file tablespace.
- B. TEST_TBS is a bigfile tablespace (BFT).
- C. TEST_TBS is the default temporary tablespace.
- D. TEST_TBS is a dictionary-managed tablespace.

Answer: D

264. Which two statements regarding a SQL profile are true? (Choose two.)

- A. It is built by Automatic Tuning Optimizer.
- B. It cannot be stored persistently in the data dictionary.
- C. It can be used by the query optimizer automatically.
- D. It can be created manually by using the CREATE PROFILE command.

Answer: AC

265. What two statements are true regarding the recommendations received from the SQL Access Advisor? (Choose two.)

- A. It can recommend partitioning only on tables that have at least 10,000 rows.
- B. It cannot generate recommendations that support multiple workload queries.
- C. It can recommend only B-tree indexes and not bitmap or function-based indexes.
- D. It can recommend partitioning on tables provided that the workloads have some predicates and joins on the columns of the NUMBER or DATE type.

Answer: AD

266. You executed the following SQL statement to shrink the EMPLOYEES table segment stored in the EXAMPLE tablespace:

```
ALTER TABLE employees SHRINK SPACE CASCADE;
```

Which statement is correct in this scenario?

- A. The EMPLOYEES table will be changed to read-only mode during the shrink operation.
- B. The indexes created on the EMPLOYEES table will need to be rebuilt after the shrink operation is over.
- C. The shrink behavior will be cascaded to all dependent segments of the table that support a shrink operation.
- D. Data manipulation language (DML) operations will not be possible on the EMPLOYEES table during the COMPACTION phase of the shrink operation.

Answer: C

267. You have three temporary tablespace groups named G1, G2, and G3 in your database.

You are creating a new temporary tablespace as follows:

```
CREATE TEMPORARY TABLESPACE TEMP1 TEMPFILE '/u1/data/temp1.dbf' SIZE 10M TABLESPACE  
GROUP '';
```

Which statement regarding the above command is correct?

- A. It will create the tablespace TEMP1 in group G1.
- B. It will create the tablespace TEMP1 in group G3.
- C. It will not add the tablespace TEMP1 to any group.
- D. It will create the tablespace TEMP1 in the default group.

Answer: C

268. You want to analyze a SQL Tuning Set (STS) using SQL Performance Analyzer in a test database. Which two statements are true regarding the activities performed during the test execution of SQL statement in a SQL Tuning Set? (Choose two.)

- A. Every SQL statement in the STS is considered only once for execution.
- B. The SQL statements in the STS are executed concurrently to produce the execution plan and execution statistics.
- C. The execution plan and execution statistics are computed for each SQL statement in the STS.
- D. The effects of DDL and DML are considered to produce the execution plan and execution statistics.

Answer: AC

269. Which statement is true regarding the retention policy for the incidents accumulated in the Automatic Diagnostic Repository (ADR)?

- A. The incident metadata is purged when the problem is resolved and the DBA closes the SR.
- B. The incident files and dumps are not retained in the ADR for the manually created incidents.
- C. The incident files are retained but the incident metadata is purged when the problem is resolved and the DBA closes the SR.
- D. The default setting is for one year after which the incident metadata is purged from the ADR and the files are retained for one month.

Answer: D

270. You are working on a CATDB database that contains an Oracle Database version 11.1 catalog schema owned by the user RCO11. The INST1 database contains an Oracle Database version 10.1 catalog schema owned by the user RCAT10.

You want the RMAN to import metadata for database IDs 1423241 and 1423242, registered in RCAT10, into the recovery catalog owned by RCO11. You executed the following commands:

```
RMAN> CONNECT CATALOG rco11/password@catdb
```

```
RMAN> IMPORT CATALOG rcat10/oracle@inst1 NO UNREGISTER;
```

Which two statements are true regarding the tasks accomplished with these commands? (Choose two.)

- A. They import all metadata from the RCAT10 catalog.
- B. They unregister the database from the RCAT10 catalog.
- C. They do not register the databases registered in the RCAT10 catalog.
- D. They register all databases registered in the RCAT10 catalog.

Answer: AD

271. You performed the RMAN database backup having a backupset key number 231 with the KEEP FOREVER option. After some days, you want to change the status of the database backup and you issued the following command:

```
RMAN>CHANGE BACKUPSET 231 NOKEEP;
```

What is the implication of this command?

- A. The backup is deleted.
- B. The backup is marked unavailable.
- C. The backup overrides the backup retention policy.
- D. the backup becomes eligible for deletion according to the existing retention policy

Answer: D

272. On which two database objects can the VERSIONS clause of the Flashback Versions Query be used? (Choose two.)

- A. fixed tables
- B. heap tables
- C. external tables
- D. temporary tables
- E. Index-Organized Tables (IOTs)

Answer: BE

273. Which two statements about the SQL Management Base (SMB) are true? (Choose two.)

- A. It contains only SQL profiles generated by SQL Tuning Advisor.
- B. It stores plans generated by the optimizer using a stored outline.
- C. It is part of the data dictionary and stored in the SYSAUX tablespace.
- D. It is part of the data dictionary and stored in the SYSTEM tablespace.
- E. It contains the statement log, the plan history, plan baselines, and SQL profiles.

Answer: CE

274. Your system has been upgraded from Oracle Database 10g to Oracle Database 11g. You imported SQL Tuning Sets (STS) from the previous version. After changing the OPTIMIZER_FEATURE_ENABLE parameter to 10.2.0.4 and running the SQL Performance Analyzer, you observed performance regression for a few SQL statements. What would you do with these SQL statements?

- A. Set OPTIMIZER_USE_PLAN_BASELINES to FALSE to prevent the use of regressed plans.
- B. Capture the plans from the previous version using STS and then load them into the stored outline.
- C. Capture the plans from the previous version using STS and then load them into SQL Management Base (SMB).
- D. Set OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES to FALSE to prevent the plans from being loaded to the SQL plan baseline.

Answer: C

275. Which two are the prerequisites to enable Flashback Data Archive? (Choose two.)

- A. Undo retention guarantee must be enabled.
- B. Database must be running in archivelog mode.
- C. Automatic undo management must be enabled.
- D. The tablespace on which the Flashback Data Archive is created must be managed with Automatic Segment Space Management (ASSM).

Answer: CD

276. ENCRYPT_TS is an encrypted tablespace that contains tables with data. Which statement is true regarding the effect of queries and data manipulation language (DML) statements on the encrypted data

in the tables?

- A. The data is decrypted during SORT and JOIN operations.
- B. The data remains encrypted when it is read into memory.
- C. The data remains encrypted when it is stored in the redo logs.
- D. The data remains encrypted in the UNDO tablespace provided that the UNDO tablespace was created with the encryption option enabled.

Answer: C

277. You are managing Oracle Database 11g with an ASM storage with high redundancy. The following command was issued to drop the disks from the dga disk group after five hours:

```
ALTER DISKGROUP dga OFFLINE DISKS IN FAILGROUP f2 DROP AFTER 5H;
```

Which statement is true in this scenario?

- A. It starts the ASM fast mirror resync.
- B. It drops all disk paths from the dga disk group.
- C. All the disks in the dga disk group would be OFFLINE and the DISK_REPAIR_TIME disk attribute would be set to 5 hours.
- D. All the disks in the dga disk group in failure group f2 would be OFFLINE and the DISK_REPAIR_TIME disk attribute would be set to 5 hours.

Answer: D

278. You create a new Automatic Database Diagnostic Monitor (ADDM) task:

```
my_instance_analysis_mode_task.
```

To view the ADDM report, you use the following command:

```
SQL> SELECT dbms_addm.get_report('my_instance_analysis_mode_task') FROM dual;
```

You want to suppress ADDM output relating to Segment Advisor actions on user SCOTT's segments.

What would you do to achieve this?

- A. Add a finding directive for the ADDM task.
- B. Add a segment directive for the ADDM task.
- C. Add a parameter directive for the ADDM task.
- D. Disable the Segment Advisor from the Automatic Maintenance Task.

Answer: B

279. Identify three key features of ASM. (Choose three.)

- A. file striping
- B. allocation unit mirroring
- C. automatic disk rebalancing
- D. automatic file size increment
- E. automatic undo management

Answer: ABC

280. Which statement about the enabling of table compression in Oracle Database 11g is true?

- A. Compression can be enabled at the table, tablespace, or partition level for direct loads only.
- B. Compression can be enabled only at the table level for both direct loads and conventional DML.
- C. Compression can be enabled at the table, tablespace, or partition level for conventional DML only.
- D. Compression can be enabled at the table, tablespace, or partition level for both direct loads and conventional DML.

Answer: D

281. You executed the following PL/SQL block successfully:

```
VARIABLE tname VARCHAR2(20)
```

```
BEGIN
```

```
dbms_addm.insert_finding_directive (NULL, DIR_NAME=>'Detail CPU Usage', FINDING_NAME=>'CPU  
Usage',
```

```
MIN_ACTIVE_SESSIONS=>0, MIN_PERC_IMPACT=>90);
```

```
:tname := 'database ADDM task4';  
dbms_addm.analyze_db(:tname, 150, 162);  
END;  
/
```

Then you executed the following command:

```
SQL> SELECT dbms_addm.get_report(:tname) FROM DUAL;
```

The above command produces Automatic Database Diagnostic Monitor (ADDM) analysis ____.

- A. with the CPU Usage finding if it is less than 90
- B. without the CPU Usage finding if it is less than 90
- C. with the CPU Usage finding for snapshots below 90
- D. with the CPU Usage finding for snapshots not between 150 and 162

Answer: B

282. Which statement is true regarding virtual private catalogs?

- A. The virtual private catalog owner cannot create and modify the stored scripts.
- B. A virtual private catalog owner can create a local stored script, and have read/write access to a global stored script.
- C. The set of views and synonyms that make up the virtual private catalog is stored in the schema of the RMAN recovery catalog owner.
- D. To perform most of the RMAN operations, the virtual catalog owner must have the SYSDBA or SYSOPER privilege on the target database.

Answer: D

283. Which three statements correctly describe the features of the I/O calibration process? (Choose three.)

- A. Only one I/O calibration process can run at a time.
- B. It automates the resource allocation for the Automated Maintenance Tasks.

- C. It improves the performance of the performance-critical sessions while running.
- D. It can be used to estimate the maximum number of I/Os and maximum latency time for the system.
- E. The latency time is computed only when the TIMED_STATISTICS initialization parameter is set to TRUE.

Answer: ADE

284. Which two statements are true regarding hot patching? (Choose two.)

- A. It requires relinking of the Oracle binary.
- B. It does not require database instance shutdown.
- C. It can detect conflicts between two online patches.
- D. It is available for installing all patches on all platforms.
- E. It works only in a single database instance environment.

Answer: BC

285. You have three production databases, HRDB, FINDB, and ORGDB, that use the same ASM instance. At the end of the day, while all three production database instances are running, you execute the following command on the ASM instance :

```
SQL> shutdown immediate;
```

What is the result of executing this command?

- A. The ASM instance is shut down, but the other instances are still running.
- B. It results in an error because other database instances are connected to it.
- C. All the instances, including the ASM instance, are shut down in the IMMEDIATE mode.
- D. HRDB, FINDB, and ORGDB instances are shut down in the ABORT mode and the ASM instance is shut down in the IMMEDIATE mode.

Answer: B

286. You plan to control the sessions performing a huge number of I/O operations. Your requirement is to kill the session when it exceeds a specified number of I/Os. Which statement describes a solution to the

above?

- A. Set a threshold for the default system-defined moving window baseline.
- B. Add directives to the Automatic Database Diagnostic Monitor (ADDM).
- C. Modify the profile for the targeted users for which control needs to be imposed.
- D. Implement the database resource manager to add the SWITCH_IO_REQS and SWITCH_GROUP directives.

Answer: D

287. Which of the following information will be gathered by the SQL Test Case Builder for the problems pertaining to SQL-related problems? (Choose all that apply.)

- A. ADR diagnostic files
- B. all the optimizer statistics
- C. initialization parameter settings
- D. PL/SQL functions, procedures, and packages
- E. the table and index definitions and actual data

Answer: BCE

288. Which tasks are run automatically as part of the Automated Maintenance Task by default? (Choose all that apply.)

- A. Segment Advisor
- B. SQL Access Advisor
- C. Optimizer statistics gathering
- D. Automatic SQL Tuning Advisor
- E. Automatic Database Diagnostics Monitor

Answer: ACD

289. You are managing an Oracle Database 11g database with ASM storage. The ASM disk group has the COMPATIBLE.ASM attribute set to 11.1. Which statements are true regarding extent management and allocation units in the ASM disk group? (Choose all that apply.)

- A. Extent management is completely automated.

- B. The allocation unit size may vary but the extent size is fixed.
- C. The au_size disk group attribute determines the size of allocation units in the disk group.
- D. The allocation unit size and extent size are fixed for all the disks in a disk group and cannot be changed.

Answer: AC

290. View the Exhibit that sets the threshold for the Current Open Cursors Count metric.

Why is the Significance Level threshold type not available in the threshold setting?

- A. because AWR baseline is not enabled
- B. because Current Open Cursors Count is not a basic metric
- C. because the STATISTICS_LEVEL parameter is set to BASIC
- D. because the AWR baseline is a system-defined moving window baseline

Answer: B

291. View the Exhibit to examine the Automatic SQL Tuning result details.

Which action would you suggest for the selected SQL statement in the Exhibit?

Only profiles that significantly improve SQL performance were implemented.

- A. Accept the recommended SQL profile.
- B. Collect statistics for the related objects.
- C. Run the Access Advisor for the SQL statement.
- D. Run the Segment Advisor for recommendations.

Answer: C

292. The Automatic Database Diagnostic Monitor (ADDM) analysis runs every 60 minutes on your database. Your database is facing a series of interrelated problems over a period of two hours. You need to ensure that the ADDM analysis is run over a time span of two hours in future. What would you do?

- A. Create two custom ADDM tasks.
- B. Modify the AWR snapshot time interval to two hours.
- C. Create a new scheduler window for a time period of two hours.
- D. Modify the Automatic Workload Repository (AWR) snapshot retention period to two hours.

Answer: B

293. During the installation of Oracle Database 11g, you do not set ORACLE_BASE explicitly. You

selected the option to create a database as part of the installation. How would this environment variable setting affect the installation?

- A. The installation terminates with an error.
- B. The installation proceeds with the default value without warnings and errors.
- C. The installation proceeds with the default value but it would not be an OFA-compliant database.
- D. The installation proceeds with the default value but a message would be generated in the alert log file.

Answer: D

294. Evaluate the following command:

```
SQL>ALTER SYSTEM SET db_securefile = 'IGNORE';
```

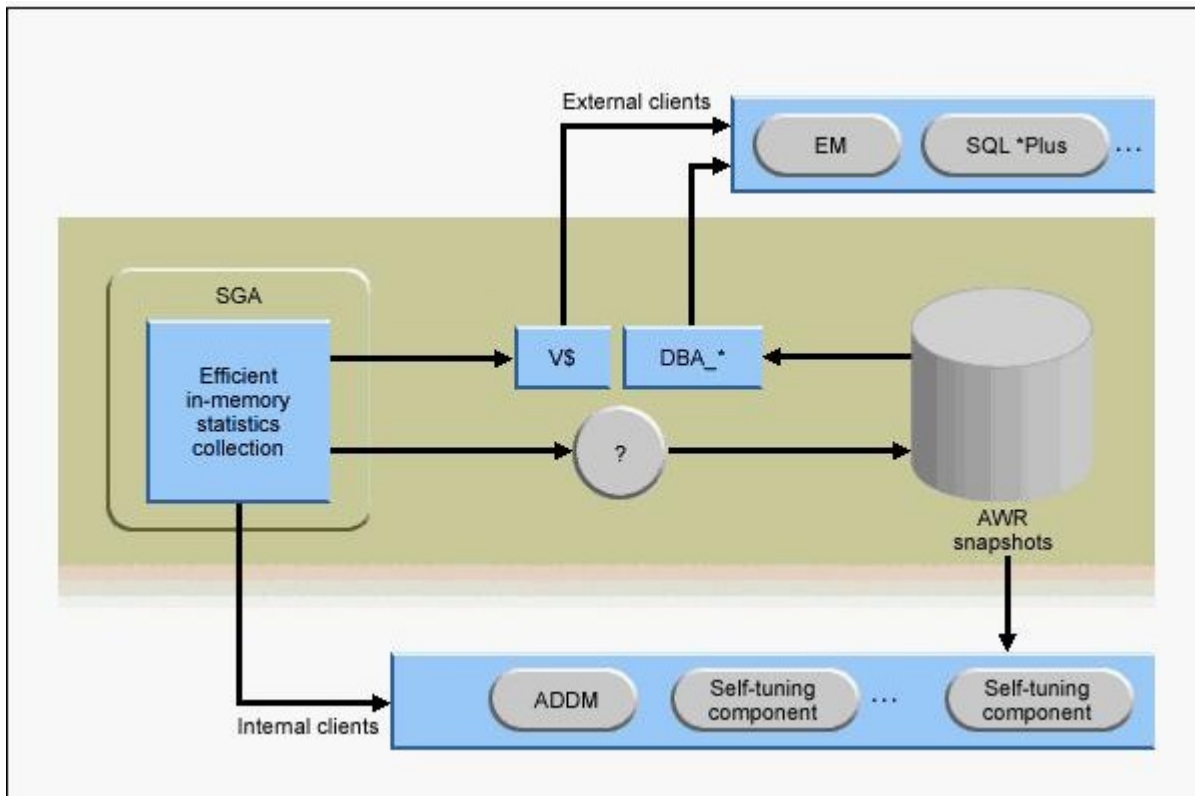

What is the impact of this setting on the usage of SecureFiles?

- A. It forces BasicFiles to be created even if the SECUREFILE option is specified to create the LOB.
- B. It forces SecureFiles to be created even if the BASICFILE option is specified to create the LOB.
- C. It does not allow the creation of SecureFiles and generates an error if the SECUREFILE option is specified to create the LOB.
- D. It ignores the SECUREFILE option only if a Manual Segment Space Management tablespace is used and creates a BasicFile.

Answer: A

295. View the Exhibit.

As shown in the diagram, in-memory statistics are transferred to the disk at regular intervals. Which background process performs this activity?

- A. CKPT
- B. SMON
- C. MMON
- D. DBWR

Answer: C

296. You are working on a CATDB database that contains an Oracle Database version 11.1 catalog schema owned by the user RCO11. The INST1 database contains an Oracle Database version 10.1 catalog schema owned by the user RCAT10.

You want the RMAN to import metadata for database IDs 1423241 and 1423242, registered in RCAT10, into the recovery catalog owned by RCO11.

You executed the following RMAN commands:

```
RMAN>CONNECT CATALOG rco11/password@catdb
```

RMAN>IMPORT CATALOG rcat10/oracle@inst1;

What happens when you execute the above commands? (Choose all that apply.)

- A. They deregister all databases registered in the RCAT10 catalog.
- B. They import metadata for all registered databases in the RCAT10 database.
- C. They register all the RCAT10-catalog registered databases in the RCO11 catalog.
- D. They overwrite all stored scripts in the RCO11 catalog with the same name as that in the RCAT10 catalog.

Answer: ABC

297. You are managing an Oracle Database 11g instance with ASM storage. You lost an ASM disk group DATA. You have RMAN backup of data as well as ASM metadata backup.

You want to re-create the missing disk group by using the ASMCMD md_restore command. Which of these methods would you use to achieve this? (Choose all that apply.)

- A. Restore metadata in an existing disk group by passing the existing disk name as an input parameter.
- B. Restore the disk group with changed disk group specification, failure group specification, disk group name, and other disk attributes.
- C. Restore the disk group with the exact configuration as the backed-up disk group, using the same disk group name, same set of disks, and failure group configurations.
- D. Restore the disk group with the exact configuration as the backed-up disk group, using the same disk group name, same set of disks, failure group configurations, and data on the disk group.

Answer: AC
